In computer programming, a thunk is a subroutine used to inject an additional calculation into another subroutine. Thunks are primarily used to delay a calculation until its result is needed, or to

insert operations at the beginning or end of the other subroutine. Think - Wikipedia In logic, negation, also called the logical complement, is an operation that takes a proposition to another proposition "not", written  $\neg$ ,  $\sim$  or  $\bar{\phantom{x}}$ . It is interpreted intuitively as being true when is false, and false when is true. Negation is thus a unary (single-argument) logical connective. It may be applied as an operation on notions, propositions, truth values, or semantic values more ...
