Foundations of Psychological Testing: A Practical Approach by Leslie A. Miller and Robert L. Lovler presents a clear introduction to the basics of psychological testing as well as psychometrics and statistics. Aligned with the 2014 Standards for Educational and Psychological Testing, this practical book includes discussion of foundational concepts and issues using real-life examples and situations that students will easily recognize, relate to, and find interesting. A variety of pedagogical tools furthers the conceptual understanding needed for effective use of tests and test scores. The Sixth Edition includes updated references and examples, new In Greater Depth boxes for deeper coverage of complex topics, and a streamlined organization for enhanced readability.

Objective General English Oxford University Press - Children

The practice of primary health care has expanded beyond the "traditional" medical model. Primary-care physicians and allied professionals are called upon more frequently to address parental concerns about developmental delays, poor school performance, or behavioral problems. As a result, pediatricians, family practitioners, pediatric nurses, social workers, and speech-language specialists are faced with the issue of developmental and psychological testing. The degree of the clinician's involvement in testing varies from interpretation of reports to performing screening or assessments. In many cases, the primary health care professional assumes the role of case manager. Unfortunately, cooperation between disciplines often has been limited because of poor communication, particularly in regard to developmental and psychological testing, where acronyms, statistics, and jargon abound. Even professionals from mental health disciplines such as child psychiatrists or psychiatric social workers sometimes are overwhelmed. The purpose of this book, therefore, is to provide the clinician with practical information regarding developmental and psychological testing, thereby making the health care professional an "educated consumer." This text does not simply describe how psychologists perform testing; rather, it provides information to help clinicians understand what the tests contain, what their strengths and limitations are, and how they can be incorporated into practice.

This collection provides a snapshot of cutting-edge research in the rapidly developing area of cognitive approaches to multilingual mediated communication. The chapters cover important trends in current work, including: the increasing interaction between translation and interpreting research, the emergence of neuroscientific theories and methods, the role of emotion in translation processes, and the impact of cognitive aptitudes on translation performance. Exploring the interface with neighbouring research areas such as bilingualism, reading, and cognitive psychology, the book presents a variety of theoretical frameworks and constructs to support empirical research and theoretical development. The authors address new research areas, such as emotions and multisensory integration; apply new research constructs, such as eye-voice span; and expand the scope of cognitive translation studies to include agents other than the mediator. Documenting the growth in breadth and depth within cognitive translation and interpreting studies (CTIS) over the past decade, this is essential reading for all advanced students and researchers needing an up-to-date overview of cognitive translation and interpreting studies.

Nutritional Cognitive Neuroscience is an emerging interdisciplinary field of research that seeks to understand nutrition's impact on human cognition and brain health across the life span. Research in this burgeoning field demonstrates that many aspects of nutrition - from entire diets to specific nutrients - affect brain structure and function, and therefore have profound implications for understanding the nature of psychological health, aging, and disease. The aim of this Research Topic in *Frontiers in Aging Neuroscience* is to examine recent empirical and theoretical contributions from Nutritional Cognitive Neuroscience, with an emphasis on the following primary areas of inquiry. Nutrition and Brain Health An enduring aim of research in the nutritional sciences is to discover specific nutrients and dietary patterns that enhance cognitive function and brain health in the elderly. Although an abundance of evidence supports a single or a few nutrients for the promotion of cognitive performance and brain health, clinical trials using nutritional supplementation have been predominately unsuccessful. Further research is therefore needed to better characterize the contributions of specific nutrients and nutrient combinations to cognitive performance and brain health. Moderators of Nutrition's Impact on the Brain A second major area of research in Nutritional Cognitive Neuroscience investigates the mechanisms that underlie the effects of nutrition on brain health at the cellular, molecular, and circuit levels. Accumulating evidence indicates that the effects

of nutrition on brain health are complex and multifactorial, reflecting the influence of particular nutrient combinations on specific brain networks and taking into account several moderating factors. Considerably more research is needed to elucidate the complex interactions between nutrition and known moderating variables – including age, nutritional status, genes, environment, and lifestyle – in determining nutrition’s impact on cognitive function and brain health. Personalized Nutrition Research at the frontiers of Nutritional Cognitive Neuroscience establishes a personalized approach to nutritional intervention that takes into account individual variability in nutritional status, brain health, genes, environment, and lifestyle. The goal of personalized nutrition is to enhance the precision of nutritional intervention and to enable novel applications to psychological health, aging, and disease.

Organisations are communities. Increasingly the leaders of those communities are drawing on the services of psychologists to help them realise the potential of their “human capital”. What do these business psychologists do to assist in the identification, motivation and development of the talent that employees bring into their communities? The authors, all Principal Members of the Association of Business Psychologists, are experienced and qualified professionals who candidly share their experiences and learning derived from those experiences. They provide case studies and examples from real interventions, they ask provocative questions about conventional thinking and practice and they explain the models that help them make sense of the complex organisations in which they operate. Business Psychology in Practice takes us on an excursion behind the scenes in organisations. This book will be of interest to consultants, those who commission their services and anybody wrestling with ‘people issues’.

General Intelligence and Test of Reasoning owes its existence to comprehensive research and strategic planning. A thorough coverage of the reasoning section of various competitive examinations has been achieved after an in-depth research and proper analysis of original papers of the UPSC, SSC, banking services, B-school tests and tests by other central and state-level recruitment bodies. A unique aspect of this book is the approach it adopts in explaining the concepts of verbal analysis, non-verbal analysis, critical reasoning and data interpretation. Each chapter starts with a brief introduction to the various formats of questions asked in competitive examinations, followed by topic-specific tests, which provide numerous multiple-choice questions that involve students in an interactive way to improve their accuracy level. The last chapter provides scientifically structured and exam-oriented test papers to familiarize candidates with current trends and types of questions. These test papers and self-scoring tables will help students assess their own level of preparation.
