Combining 25 years of  
clinical, research and  
teaching experience,  
Dr Lisa Harvey  
provides an innovative  
5-step approach to the  
physiotherapy  
management of people  
with spinal cord injury.  
Based on the  
International  
Classification of  
Functioning, this  
approach emphasises  
the importance of

setting goals which are purposeful and meaningful to the patient. These goals are related to performance of motor tasks analysed in terms of 6 key impairments. The assessment and treatment performance of each of these impairments for people with spinal cord injury is described in the following chapters:

- training motor tasks
- strength training
- contracture management
- pain management
- respiratory management
- cardiovascular fitness training

Dr Harvey develops readers' problem-solving skills equipping them to manage all types of spinal cord injuries. Central to these skills is an understanding of

how people with different patterns of paralysis perform motor tasks and the importance of different muscles for motor tasks such as: transfers and bed mobility of people wheelchair mobility hand function for people with tetraplegia standing and walking with lower limb paralysis

This book is for students and junior physiotherapists with little or no experience in the area of spinal cord injury but with a general understanding of the principles of physiotherapy. It is also a useful tool for experienced clinicians, including those keen to explore the evidence base that supports different physiotherapy interventions.

Rehab Society

An invaluable resource for anyone touched by spinal cord injury- newly injured patients, longtime survivors, friends and loved ones, and medical professionals-A

Complete Plain English Guide to Living with an Incomplete Spinal Cord Injury offers a survivor's perspective on the physical and emotional journey from the time of injury, through the entire recovery process, and on to living a full and happy life. This thorough, down-to-earth manual delivers solid, factual information and real-world advice from someone who has been there. Carolyn Boyles, a long-term spinal cord injury survivor, translates medical jargon into plain

English, and helps you understand everything you need to know about living and thriving with an injured spinal cord. Boyles' handbook covers surgeries and complications, treatment and rehabilitation, working with medical professionals, dealing with family and friends, understanding your unique injury, prognosis and life expectancy, maintaining hope and faith, working through emotional baggage (including the many forms of survivor guilt), what to expect physically, and how to rebuild a quality life. She candidly answers all the questions nobody wants to ask, and she even includes statistics, ideas for additional reading and

movies, resources, and more. But most importantly, she shows you that a spinal cord injury is not a life-ending event, but rather a new beginning.

**Neuroprosthetics and Brain-Computer Interfaces in Spinal Cord Injury** Springer Nature

This book describes validated outcome measures for the international Spinal Cord Injury population. Based on rigorous systematic reviews of ca. 80,000 scientific articles, the authors present assessment tools for various clinical uses in the health sciences, following parameters of validity, reliability, and responsiveness. It is important for the development of clinical practice and research that practical and appropriate measures become universally accepted; this would allow comparisons and meta-analysis of high-quality randomized controlled trials of people with this increasingly common injury. This book emphasizes the need for consensus among

researchers as to which tools must be studied in depth or adapted to other national contexts, or which measurement instruments should be standardized in order to develop universal norms and standards for the performance of people with Spinal Cord Injury. It offers a valuable practical guide for clinicians, rehabilitation professionals and nurses, but will also help researchers to gain more confidence in using valid and reliable assessment tools for comparable clinical trials.
