Simplified Signs presents a system of manual sign communication intended for special populations who have had limited success mastering spoken or full sign languages. It is the culmination of over twenty years of research and development by the authors. The Simplified Sign System has been developed and tested for ease of sign comprehension, memorization, and formation by limiting the complexity of the motor skills required to form each sign, and by ensuring that each sign visually resembles the meaning it conveys. Volume 1 outlines the research underpinning and informing the project, and places the Simplified Sign System in a wider context of sign usage, historically and by different populations. Volume 2 presents the lexicon of signs, totalling approximately 1000 signs, each with a clear illustration and a written description of how the sign is formed, as well as a memory aid that connects the sign visually to the meaning that it conveys. While the Simplified Sign System originally was developed to meet the needs of persons with intellectual disabilities, cerebral palsy, autism, or aphasia, it may also assist the communication needs of a wider audience – such as healthcare professionals, aid workers, military personnel, travellers or parents, and children who have not yet mastered spoken language. The system also has been shown to enhance learning for individuals studying a foreign language. Lucid and comprehensive, this work

constitutes a valuable resource that will enhance the communicative interactions of many different people, and will be of great interest to researchers and educators alike.

Mentalization-Based Treatment for Adolescents (MBT-A) is a practical guide for child and adolescent mental health professionals to help enhance their knowledge, skills and practice. The book focuses on describing MBT work with adolescents in a practical way that reflects everyday clinical practice. With chapters authored by international experts, it elucidates how to work within a mentalization-based framework with adolescents in individual, family and group settings. Following an initial theoretical orientation embedded in adolescent development, the second part of the book illuminates the MBT stance and technique when working with young people, as well as the supervisory structures employed to sustain the MBT-A therapist. The third part describes applications of MBT-A therapies to support adolescents with a range of presentations. This book will appeal to therapists working with adolescents who wish to develop their expertise in MBT as well as other child and adolescent mental health professionals.

Detecting Malingering and Deception: Forensic Distortion Analysis (FDA-5), Third Edition maintains the tradition of the prior two editions, following the Forensic Distortion Analysis (FDA) model. Fully updated since the last edition nearly 20 years ago, the book continues to serve as a comprehensive volume on deception and distortion in forensic, clinical and several specialized contexts. As with the previous editions, the book presents a model of deception intended to be utilized and applied by the qualified evaluator. The proposed model covers targets of the faker, response styles shown, and methods to detect the deception. The goal is to summarize the historical and latest information on distortion detection, to present guidelines for detecting deception that include variable accuracy rates based on different detection techniques, and to stimulate further research of effective methods of deception detection. Recommendations and guidelines for the practicing clinician are offered throughout the book, including real-world cases to inform and enlighten, particularly in unique cases or those in which the certain outcomes are unexpected. Key Features: Outlines the role of the forensic professional in applying and integrating methods assessment in deception and distortion Provides base-rates for deception-related behavior and events, especially useful in report writing or courtroom testimony as an expert witness Presents the latest advances in methodology and technology to assist in the search for ground truth in applied settings and situations Applies forensic distortion
