"Through the  
 Lens of  
 Anthropology  
 is a concise  
 but  
 comprehensive  
 e introductory  
 textbook that

uses the twin  
 themes of  
 food and  
 sustainability  
 to illustrate  
 the connected  
 nature of  
 anthropology'

s four major subfields: archaeology, and biological, cultural, and linguistic anthropology. By viewing the world through the lens of anthropology, students will learn not only about anthropological methods, theories, and ethics, but also the ways in which anthropology is relevant to their everyday lives and embedded in the culture that surrounds them. Beautifully illustrated throughout, with over 150

full-color images, figures, feature boxes, and maps, this is an anthropology text with a fresh perspective, a lively narrative, and plenty of popular topics that are sure to engage readers. A strong pedagogical framework structures the book: each chapter features learning objectives, glossary terms, and chapter summaries, as well as review and discussion

questions which guide students' analysis of the topics, themes, and issues raised in the text. This book is interesting to read, manageable to teach, and succeeds at igniting interest in anthropology as a discipline. The new edition will enhance the food and sustainability focus in examples and features and will build a stronger narrative voice using extending examples and

case studies. A new section on decolonization , as well as including more Indigenous examples works to decolonize Anthropology as much as possible. The content will be updated and fresh, especially including new biological anthropology research, by including new feature boxes and case studies."--  
Human Evolution and Culture OUP Oxford  
 If you're intrigued by

the question "What makes us human?", strap in for this whirlwind tour of the highlights of anthropology. From the first steps of our prehistoric ancestors, to the development of complex languages, to the intricacies of religions and cultures across the world, diverse factors have shaped the human species as we know it. Anthropology strives to untangle this fascinating web of history to work out

who we were in the past, what that means for human beings today and who we might be tomorrow. This pocket-sized introduction includes accessible primers on: Influential anthropologists such as Franz Boas, Margaret Mead and Ruth Benedict. The key branches of anthropology, from physical and linguistic anthropology to archaeology. How anthropologists study topics

such as communication, identity, sex and gender, religion and culture. How we can approach one of life's most enduring questions: what is it that truly makes us human? This illuminating little book will introduce you to the key thinkers, themes and theories you need to know to understand the development of human beings, and how our history has informed the way we live

today. A perfect gift for anyone taking their first steps into the world of anthropology, as well as for those who want to brush up their knowledge. *Introducing Anthropology* John Wiley & Sons Humans presents the breadth of anthropology in a concise textbook planned for use with supplementary ethnographies. Designed for either an introductory four-field or cultural

anthropology course, it covers the basic concepts of linguistics, archaeology, physical and cultural anthropology in a readable style with well-chosen illustrative examples. Instructors have found ethnographies most effective for teaching anthropological understanding; this text's brevity permits the instructor to assign several full-length case studies, without skimming the foundation for

a holistic approach. The text covers the discipline and its major sub-fields, with a minimal use of technical terms. Both photo-essays drawn from the author's own fieldwork and examples taken from popular culture work to engage students, prompting them to question how it is we know what we know. A solid foundational text, *Humans* will suit any program. Introducing Anthropology:

An Integrated Approach  
SAGE Publications  
This clear and engaging guide introduces students to key areas of the field and shows how to apply an anthropological approach to the study of religion in the contemporary world. Written by an experienced teacher, it covers major traditional topics including definitions, theories and beliefs as well as symbols, myth and ritual. The

book also explores important but often overlooked issues such as morality, violence, fundamentalism, secularization, and new religious movements. The chapters all contain lively case studies of religions practiced around the world. The second edition of *Introducing Anthropology of Religion* contains updated theoretical discussion plus fresh ethnographic

examples throughout. In addition to a brand new chapter on vernacular religion, Eller provides a significantly revised chapter on the emerging anthropologies of Christianity and Islam. The book features more material on contemporary societies as well as new coverage of topics such as pilgrimage and paganism. Images, a glossary and questions for discussion are now included and additional

resources are provided via a companion website. **The Human Way** MacMillan Publishing Company This accessible book introduces the story of 'social science', with coverage of history, politics, economics, sociology, psychology, anthropology, and geography. Key questions include: How and why did the social sciences originate and differentiate? How are they

related to older traditions that have defined Western civilization? What is the unique perspective or 'way of knowing' of each social science? What are the challenges—and alternatives—to the social sciences as they stand in the twenty-first century? Eller explains the origin, evolution, methods, and the main figures, literature, concepts, and theories in each

discipline. The chapters also feature a range of contemporary examples, with consideration given to how the disciplines address present-day issues.

Cambridge University Press

This book is a fascinating account of an uncertain human science seeking to transcend its unsavory history.

An Introduction to Theory in

Anthropology  
Red Globe Press  
This lively, innovative volume presents cultural anthropology as an adventure —focusing on readers' curiosity about their own participation in humanness, and incorporating the excitement of field discoveries throughout. Combining discussions with the vitality of ethnographic accounts, it first presents

the basic concepts relating to culture and social organization, applies them to specific cultures, and concludes with a survey of contemporary issues and the contributions in the field of anthropology. The Human Perspective : We the People. People Looking at People. The Adventure of Anthropology. The Organization of Human Groups: The Political Economy. Culture in Its

Material Context. Sex, Marriage, and Family Relationships. Acquiring and Transmitting Culture : Language and Symbols, Order and Change. The Nature of Human Nature. The Question of Meaning : Natural and Supernatural Orders. Expressive Culture. Human Ways of Life : Foragers. Pastoralists. Horticulturalists. Agriculturists. The Adventures of Anthropology Continues:

The People We Study. The People We Are. *Through the Lens of Anthropology* McGraw-Hill Humanities, Social Sciences & World Languages Excerpt from Man: An Introduction to Anthropology The first edition of this book, published in 1900, has been out of print for some time. In this edition the same general plan has been followed; and, while there have been but few changes

made, there are a number of additions. A new chapter has been added on "The Development of Culture" in which some of the views presented, I think, can not be found elsewhere. There are many excellent works written on zoology, treating of the various phases of animal life, some of them ending with, and others including, man; but, beyond mentioning the different races of

mankind, the majority of them have very little to say relative to the human species; and, on the other hand, the many different books, so far as I know, written in the English language, treating of mankind, start out with the consideration of man as man, and make little or no reference to the zoological aspect of the subject, i. e., the zoology of man.  If you're intrigued by the question "What makes us human?", strap in for this whirlwind

tour of the highlights of anthropology. . . From the first steps of our prehistoric ancestors, to the development of complex languages, to the intricacies of religions and cultures across the world, diverse factors have shaped the human species as we know it. Anthropology strives to untangle this fascinating web of history to work out who we were in the past, what that means for human beings

today and who we might be tomorrow. *The Human Way; Readings in Anthropology* Prentice Hall Introducing Anthropology is the first book of its kind. It offers a serious but accessible introduction to anthropology and is the perfect starting point for anyone new to the subject. Across a series of fourteen chapters, it addresses the different fields and approaches within

anthropology, covers an extensive range of themes, and emphasizes the role of anthropology in the world today. Written by two authors with a passion for teaching and a commitment to communicating the excitement of anthropology, the book has been carefully designed to support and extend students' learning. Each chapter includes: clear explanations of classic and contemporary

anthropological research help with connecting anthropological theories to real-life issues links to globalization interviews with key anthropologists about their work and the discipline as a whole a lively range of activities and discussion points ideas for personal investigations suggested ethnographic films and further reading a clear glossary a focus on developing examination and writing

skills. Introducing Anthropology aims to inspire and enthuse a new generation of anthropologists. It is suitable for a range of different readers, from students studying the subject at school-level to university students looking for a clear and engaging entry point into anthropology. *Four Ways of Being Human* Prentice Hall This collection of essays generates important enquiries into

the teaching and practice of anti-racism education, by way of working through conversations, contestations, and emotions as presented by a diverse group of strong women committed to social justice work in their own right. Throughout the collection, contemporary educational issues are situated within personal-political, historical and philosophical conversations, which work to broach the challenges

and possibilities for students, educators, staff, administrators, policy makers, and community members who engage in critical anti-racism education. This work diverges from the existing scholarship by way of bringing new insights to the theoretical possibilities of resistance and futurity as voiced through pedagogues, practitioners and scholars in anti-racism. In this book

the authors speak to the importance of anti-racism discursivity in a time when even those who desire to engage this framework struggle to be heard; in a time when there are anti-racism policies in institutions, yet to speak anti-racism philosophy remains dangerous; and in a time when, to speak race and anti-racism, is considered to be stirring up trouble in the face of post-racial discourses.

Culture Counts is a

concise introduction to anthropology that illustrates why culture matters in our understanding of humanity and the world around us. Serena Nanda and Richard L. Warms draw students in with engaging ethnographic stories and a conversational writing style that encourages them to interact cross-culturally, solve problems, and effect positive change. The brief format gives majors and non-majors the

essentials they need and frees up the instructor to teach the course the way they want to teach it. The Fifth Edition includes new examples and vignettes that are important to the study of cultural anthropology. Issues of gender, identity, globalization, intersectionality, inequality, and public health have been incorporated throughout the book, as well as a new chapter on race and

ethnicity that brings the book in step with recent conversations about power, race, and history. This title is accompanied by a complete teaching and learning package. *Culture Counts* McGraw-Hill Education This is a short and tightly managed text on anthropology. It uses a narrative approach which is user-friendly. [The Little Book of Anthropolgy](#) Hachette UK

This book presents the highlights of the popular Anthropology, 12th edition by the same author team. The size of the book (19 chapters) makes it useful for quarter courses, as well as for courses that encourage a lot of supplemental reading. This text provides students with a comprehensive and scientific introduction to the four fields of anthropology and helps

students understand humans in all their variety and why such variety exists. This new edition places an increased emphasis on immigration, migration and globalization. The four sections of the text introduce students to anthropology, address the biological and cultural evolution of humans, introduce students to cultural variation, and show how anthropology can be applied beyond academia.

**Four Ways of Being Human**  
[Pittsburgh] :  
University of Pittsburgh Press  
In this innovative introduction, Robert Layton reviews the ideas that have inspired anthropologists in their studies of societies around the world. An Introduction to Theory in Anthropology provides a clear and concise analysis of the theories, and traces the way in which they have been translated into

anthropological debates. The opening chapter sets out the classical theoretical issues formulated by Hobbes, Rousseau, Marx and Durkheim. Successive chapters discuss Functionalism, Structuralism, Interactionist theories, and Marxist anthropology, while the final chapters address the competing paradigms of Socioecology and Postmodernism. Using detailed case

studies, Professor Layton illustrates the way in which various theoretical perspectives have shaped competing, or complementary, accounts of specific human societies. Introducing Anthropological Economics Routledge This introductory text in general anthropology truly integrates the subfields of anthropology. Unlike other "four-field" texts, it is not divided by subfield but is

organized by the topics that anthropology studies, showing how all the subfields contribute to our knowledge of the human species. It is student-friendly, concise, and, while not omitting any major topic, has a managed amount of detail. The unique holistic approach focuses on the integration of the biocultural nature, evolution, and behavior of the human species.
