"It is very exciting to see all of these studies compiled in one book. It can be read sequentially or just for certain transitions. It also can be used as a template for compilation of other concepts central to nursing and can serve as a resource for further studies in transitions. It is an excellent addition to the nursing literature." Score: 95, 4 Stars. --Doody's "Understanding and recognizing transitions are at the heart of health care reform and this current edition, with its numerous clinical examples and descriptions of nursing interventions, provides important lessons that can and should be incorporated into health policy. It is a brilliant book and an important contribution to nursing theory." Kathleen Dracup, RN, DNSc Dean and Professor, School of Nursing University of California San Francisco Afaf Meleis, the dean of the University of Pennsylvania School of Nursing, presents for the first time in a single volume her original "transitions theory" that integrates middle-range theory to assist nurses in facilitating positive transitions for patients, families, and communities. Nurses are consistently relied on to coach and support patients going through major life transitions, such as illness, recovery, pregnancy, old age, and many more. A collection of over 50 articles published from 1975 through 2007 and five newly commissioned articles, Transitions

Theory covers developmental, situational, health and illness, organizational, and therapeutic transitions. Each section includes an introduction written by Dr. Meleis in which she offers her historical and practical perspective on transitions. Many of the articles consider the transitional experiences of ethnically diverse patients, women, the elderly, and other minority populations. Key Topics Discussed: Situational transitions, including discharge and relocation transitions (hospital to home, stroke recovery) and immigration transitions (psychological adaptation and impact of migration on family health) Educational transitions, including professional transitions (from RN to BSN and student to professional) Health and illness transitions, including self-care post heart failure, living with chronic illness, living with early dementia, and accepting palliative care Organization transitions, including role transitions from acute care to collaborative practice, and hospital to community practice Nursing therapeutics models of transition, including role supplementation models and debriefing models Concepts, Methodologies, Tools, and Applications American Library Association
This book is the first to take an in-depth examination of events and well-being, adopting a much-needed critical approach to the study of events. It uses empirical case studies to help us better understand how events foster positive well-being or counter negative well-being for event organisers, participants, spectators, volunteers and even non-attending local residents. While

researchers have long understood socialisation as the major motivation to attend contemporary festivals and events, it is only just being acknowledged that well-being is also a key motivator. Those researching in the field of event studies are yet to clearly articulate "the how, why, where, and impacts of socialisation." This multidisciplinary book draws together empirical research across a range of event types and sizes, from music festivals to mega sports events, to provide a nuanced understanding of their contribution to the well-being of individuals and communities. Case studies are drawn from around the world and apply a diverse range of theoretical lenses to the conceptualisation of well-being as it applies to events and methodologies used to achieve research aims and objectives. This significant volume will be valuable reading for students and academics in the fields of sport studies, critical event studies, queer studies, cultural studies, tourism, music, sociology and end-of-life studies.

A Guide for Social Science Students

and Researchers IGI Global

Most early social research into planned events had the effect of broadcasting narratives of dominant cultures and privileged groups. More recently, however, convergences of gender, sexualities, ethnicities, age, class, religion, and intersectional analyses and events studies have started to drive new critical understanding of the impacts of events on non-mainstream, non-majority communities around the globe. This timely book addresses current gaps in the literature surrounding issues of accessibility, inclusion, and diversity in various event landscapes. Structured into four sections covering the main types of events, the chapters present original topics using innovative methodological approaches. Each chapter employs a case study to illustrate the key intertwining issues in these various experiential realms. Further, the chapters are all cross- or interdisciplinary, drawing on gender, sexualities, cultural, race/ethnicity studies as well as multiple literatures that feed into critical events studies and exploring a variety of global examples. This significant book opens the path to further research on the role and importance of accessibility, inclusion, and diversity in events environments worldwide. It will be of interest to academics and researchers of critical event studies as well as a number of related social science disciplines.
