Excerpt from A Course of Elementary Instruction in Practical Biology The first edition of the Course of Practical Instruction in Elementary Biology appeared twelve years ago, and the motives which led to its publication are fully explained in the original preface, which is subjoined. The present edition has been carefully revised and, where necessary, enlarged by my colleagues Mr Howes and Dr Scott, assistant Professors in Zoology and Botany in the Normal School of Science and Royal School of Mines, and such additions and improvements are entirely their work. But besides these changes, the reader who compares the two editions will observe that the order in which the subjects are presented is completely changed. In the first edition the lowest forms of life were first dealt with; the series of plants followed in ascending order; and then the series of animals, from the Bell animalcule upwards to the Frog. Harry R. Matthews, PhD, Richard Freedland, PhD, Roger L. Miesfeld, PhD No scientific discipline has experienced such explosive growth or attracted so much popular attention over the past several decades as the study of life at the molecular level. The most quantitative of biological sciences, biochemistry studies the chemical components of living matter; the reactions these components undergo; the energetic changes that accompany such reactions; and the organization, replication, and expression of genes. *Biochemistry: A Short Course* introduces students to the fundamentals of this fascinating scientific discipline. Based on the authors' years of experience teaching graduate, undergraduate, and professional courses, this comprehensive introduction caters to the specific needs of researchers and students who must familiarize themselves rapidly with core concepts, principles, and theories. Students are afforded a unique opportunity to arrive at a full understanding of important current and pending achievements in the field, without having to wade through extraneous technical details and lengthy theoretical discussions more appropriate to a lab manual or specialized text. Identifies key concepts and covers the essentials for nonmajors and anyone looking for a concise review of modern aspects of biochemistry * Ideal for quick review, follows the critically acclaimed Short Course format, with abundant clear illustrations of key concepts * Includes closely related areas of molecular and cell biology * Features practical examples, including cancer and other diseases, drawn primarily from humans Here is the ideal textbook for medical students as well as graduates and undergraduates in biochemistry, medical biochemistry, and molecular biology courses. It is also an excellent selection for technicians and related professionals who want to review modern aspects of biochemistry in a concise format.

A Course of Elementary Instruction in Practical Biology John Wiley & Sons

For the 11th edition of BIOLOGY: UNITY AND DIVERSITY OF LIFE, Cecie Starr and Ralph Taggart made it their goal to solve some of the toughest Introductory Biology course challenges. We introduce a new issues-oriented approach with engages students in current, motivating biological topics; a built-in cross-referencing system for key topics; and, most importantly, time-saving media resources for instructors. Show students how biology matters - Opening each chapter with engaging essays on hot issues and related online voting, the text highlights the connections between biology and real-life. Online exercises promote critical thinking about issues students will face as consumers, parents and citizens. Link concepts from chapter to chapter - Students often have a difficult time with this, so the authors created a linking tool. A list at the start of each chapter reminds students of related topics that were explained earlier. Within chapters, a key icon identifies cross-references to relevant sections in earlier chapters. As students work through the text, they see how topics build upon one another. Monitoring students' progress with ease - *BiologyNow*™ offers diagnostic quizzes with automatically graded results that flow directly into your instructor gradebook (iLrn, WebCT or BlackBoard). And, to assess students' progress instantly with in-class quizzes and polls, you can use JoinIn™ on TurningPoint content and software. Easier lecture prep - The new *PowerLecture* tool integrates all chapter assets - art, photos, animations, videos, links to InfoTrac articles, web links and everything else you need into each chapter's lecture slides. This buffet of media resources-arranged by chapter section is at your fingertips. Just cut and paste what you want into your lecture file. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.
