*Bleher's Biotopes. Expedition to Aquatic Habitats, Aquatic Biotopes in Nature, Biotope Aquarium*  
 Timber Press

The essential guide to creating your own underwater world. Sunken Gardens is packed with everything you need to plan, design, and maintain a planted freshwater aquarium. Karen Randall shares her years of expertise and makes this enchanting hobby accessible to everyone. You'll learn everything from the biology of aquatic plants and basic aquarium chemistry to tank maintenance and troubleshooting. Plant profiles highlight the best options for a range of tank situations, and a chapter devoted to aquascaping styles provides basic design principles and inspiring examples. With hundreds of color photographs and clear, reliable advice, Sunken Gardens is an essential introduction to a fascinating pastime.

*The Planthunter* John Wiley & Sons

Aquascaping is a fascinating hobby that has evolved over centuries. The idea of making an environment that supports life and is aesthetically appealing is an exciting quest for many people. Technology has evolved to support more species, in cleaner and longer lasting environments. This color book will give you the facts to start your own aquarium and learn aquascaping freshwater and salt water tanks, from styles and design to set up with planting, lighting, substrate, coral, and ornaments, including live rock. You will also gain the knowledge of the nitrogen cycle and water testing for aquarium maintenance.

*Exotic Aquarium Fishes* Wiley Global Education

Attractively planted aquariums are fascinating. They transplant a piece of Nature into your house and have a balancing and relaxing effect. Fish are particularly happy in well-planted aquariums and will show off their best coloration. This book presents methods for creating beautifully planted aquariums based on 25 years of practical experience, including planning, preparations, and step-by-step instructions; successful maintenance of planted aquariums; tips for choosing appropriate plants; and solutions for potential problems.

*Modern Nishikigoi* Elsevier

This text describes the temperature, water, fertilizer and light needs of more than 300 aquarium plants. Artificial lighting - lamp types, colour temperatures and mounting - is discussed in detail and the author provides advice on choosing the right plants for an aquarium. Ecological factors, flower biology and morphology and reproduction methods receive detailed coverage. The book contains colour photographs with nearly all plants depicted with fully developed submerged foliage. Botanists as well as professional and amateur keepers should find this book useful.

The author, Bryan Chin, has won IFGA Best in Show awards in tank and delta categories. Also he has won in class awards in Greens, Multicolor, Blue, Reds, Purple, Blue-Green Bicolor, and Breeder Male. In 2013 he was named Guppy Man of the Year. He has written fancy guppy articles published in the IFGA newsletter and his Rocky Mountain Guppy Association club website ([guppywest.com](http://guppywest.com)). He has also spoken at aquariums clubs regarding the breeding of show guppies. His fish photographs have been published in Tropical Fish Hobbyist and Amazonas magazines. Written from experience and illustrated throughout with over 100 diagrams, tables, and full color photos. Breeding Show Guppies

provides readers with how to breed show winning guppies, from selecting the right fish to providing the best aquarium management and health. Contains valuable information about: - Maintaining good water conditions - Healthy growth in guppies - Breeding Techniques - Problem solving to fine tune your show guppies - Journal on breeding winning green guppies - Showing guppies

*The West without Water* documents the tumultuous climate of the American West over twenty millennia, with tales of past droughts and deluges and predictions about the impacts of future climate change on water resources. Looking at the region's current water crisis from the perspective of its climate history, the authors ask the central question of what is "normal" climate for the West, and whether the relatively benign climate of the past century will continue into the future. *The West without Water* merges climate and paleoclimate research from a wide variety of sources as it introduces readers to key discoveries in cracking the secrets of the region's climatic past. It demonstrates that extended droughts and catastrophic floods have plagued the West with regularity over the past two millennia and recounts the most disastrous flood in the history of California and the West, which occurred in 1861-62. The authors show that, while the West may have temporarily buffered itself from such harsh climatic swings by creating artificial environments and human landscapes, our modern civilization may be ill-prepared for the future climate changes that are predicted to beset the region. They warn that it is time to face the realities of the past and prepare for a future in which fresh water may be less reliable.

*Breeding Show Guppies* \*Howell Book House

This compact, richly-illustrated guide explores all aspects of growing and displaying plants in a home aquarium. The emphasis is on presenting key facts and essential guidance in short, easy-to-access notes that build into a wealth of practical information. Harnessing the experience of real experts, the Aquamaster Guides combine stylish design with rock-solid advice.

*Nature Aquarium* Tfh Publications Incorporated

An expert answers aquarium owners' questions about selecting and maintaining water plants for the aquarium. Readers learn how plants and fish interact, and how to sustain the correct water temperature and chemical balance. Filled with full-color photos and drawings.

**Ecology** Independently Published

Literally hundreds of different tropical freshwater fish are shown in vivid color photos and described for aquarium hobbyists. Readers will also find information on general aquarium maintenance. More than 300 color photos. Titles in the Compass Guides series are handsome and practical quick-reference sources for pet owners, pet fanciers, and aquarium and terrarium hobbyists. Books feature brief descriptive profiles of their subject animals, each profile consisting of a color photo, the animal's place of origin, its basic housing and feeding needs, and its physical traits and temperament. In addition to the profiles, each Compass Guide also contains general information on animal species and their families. 200-to-300 color photos and index.

Timothy Morton argues that ecological awareness in the present Anthropocene era takes the form of a strange loop or Möbius strip, twisted to have only one side. Deckard travels this oedipal path in *Blade Runner* (1982) when he learns that he might be the enemy he has been ordered to pursue. Ecological awareness takes this shape because ecological phenomena have a loop form that is also fundamental to the structure of how things are. The logistics of agricultural society resulted in global warming and hardwired dangerous ideas about life-forms into the human mind. Dark ecology puts us in an uncanny position of radical self-knowledge, illuminating our place in the biosphere and our belonging to a species in a sense that is far less obvious than we like to think. Morton explores the logical foundations of the ecological crisis, which is suffused with the melancholy and negativity of coexistence yet evolving, as we explore its loop form, into something playful, anarchic, and comedic. His work is a skilled fusion of humanities and scientific scholarship, incorporating the theories and

findings of philosophy, anthropology, literature, ecology, biology, and physics. Morton hopes to reestablish our ties to nonhuman beings and to help us rediscover the playfulness and joy that can brighten the dark, strange loop we traverse.

*The 101 Best Aquarium Plants* Firefly Books Limited

This book describes the sexual behavior of guppies and examines how mate choice by females leads to the evolution of the conspicuous colors and the courtship displays for which guppies are widely recognized. The author shows that female guppies prefer males with bright color patterns, especially those with orange spots, and that the mating preferences of females lead to sexual selection on both color patterns and courtship displays of males.

*Aquatic Plants of the Upper Midwest* B.E.S. Publishing

An exciting and refreshing call to arms, *The Planthunter* is a new generation of gardening book for a new generation of gardener that encourages readers to fall in love with the natural world by falling in love with plants.

*Molecular Ecology* provides a comprehensive introduction to the many diverse aspects of this subject. The book unites theory with examples from a wide range of taxa in a logical and progressive manner, and its accessible writing style makes subjects such as population genetics and phylogenetics highly comprehensible to its readers. The first part of the book introduces the essential underpinnings of molecular ecology, starting with a review of genetics and a discussion of the molecular markers that are most frequently used in ecological research. This leads into an overview of population genetics in ecology. The second half of the book then moves on to specific applications of molecular ecology, covering phylogeography, behavioural ecology and conservation genetics. The final chapter looks at molecular ecology in a wider context by using a number of case studies that are relevant to various economic and social concerns, including wildlife forensics, agriculture, and overfishing \* comprehensive overview of the different aspects of molecular ecology \* attention to both theoretical and applied concerns \* accessible writing style and logical structure \* numerous up-to-date examples and references This will be an invaluable reference for those studying molecular ecology, population genetics, evolutionary biology, conservation genetics and behavioural ecology, as well as researchers working in these fields.

*Creating a Natural Aquarium* Createspace Independent Publishing Platform

Provides information on setting up a saltwater aquarium, accessories, salt mixes, and over three hundred marine fish and invertebrates.

This is the second edition of *Freshwater Algae*; the popular guide to temperate freshwater algae.

This book uniquely combines practical information on sampling and experimental techniques with an explanation of basic algal taxonomy plus a key to identify the more frequently-occurring organisms.

Fully revised, it describes major bioindicator species in relation to key environmental parameters

and their implications for aquatic management. This second edition includes: the same clear writing style as the first edition to provide an easily accessible source of information on algae within standing and flowing waters, and the problems they may cause the identification of 250 algae using a key based on readily observable morphological features that can be readily observed under a conventional light microscope up-to-date information on the molecular determination of taxonomic status, analytical microtechniques and the potential role of computer analysis in algal biology upgrades to numerous line drawings to include more detail and extra species information, full colour photographs of live algae – including many new images from the USA and China Bridging the gap between simple identification texts and highly specialised research volumes, this book is used both as a comprehensive introduction to the subject and as a laboratory manual. The new edition will be invaluable to aquatic biologists for algal identification, and for all practitioners and researchers working within aquatic microbiology in industry and academia.

*Genetics for Guppies* is written to help the guppy breeder understand and use genetics. This is accomplished with clear explanations, illustrations, tables, and over 40 color photographs. Contains valuable information about: - How genes are inherited and interact. - Genetic terminology explained - Identifying if a gene is sex linked or autosomal. - How meiosis process distributes genes to egg and sperm. - Applying genetic principles to breeding programs. - Improving size of guppies.- Analyzing guppies from crosses. The author, Bryan Chin has won IFGA Best in Show awards in tank and delta categories. He has also won in class awards in Greens, Multicolor, Blue, Red, Purple, Blue-Green Bicolor, Variegated Snakeskin, and Breeder Male. In 2013 he was named Guppy Man of the Year and in 2018 qualified as IFGA Master Breeder status. Bryan has authored "Breeding Show Guppies" and "Healthy Aquarium" books. He has written fancy guppy articles published in *Tropical Fish Hobbyist* magazine, IFGA newsletter, and in his guppywest.com informational website. He has also spoken at aquariums clubs and events regarding the breeding of show guppies. His fish photographs have been used in *Tropical Fish Hobbyist* magazine, *Amazonas* magazine, websites, scientific papers, and other media.
