This sixteenth-century German guide to sword fighting and combat training is a crucial source for understanding medieval swordplay techniques. Following his translation of Joachim Meyer's The Art of Combat, Jeffrey L. Forgeng was alerted to an earlier version of Meyer's text, discovered in Lund University Library in Sweden. The manuscript, produced in Strasbourg around 1568, is illustrated with thirty watercolor images and seven ink diagrams. The text covers combat with the longsword (hand-and-a-half sword), dusack (a one-handed practice weapon comparable to a sabre), and rapier. The manuscript's theoretical discussion of guards sheds significant light on this key feature of the historical practice, not just in relation to Meyer but in relation to medieval combat systems in general. The Art of Sword Combat also offers an extensive repertoire of training drills for both the dusack and the rapier, a feature largely lacking in treatises of the period and critical to modern reconstructions of the practice. Forgeng's translation also includes a biography of Meyer, much of which has only recently come to light, as well as technical terminology and other essential information for understanding and contextualizing the work.

What is economics' missing link? Recent economic crises have had a devastating impact on society. Worryingly, they gravely risked a collapse of the financial system. These crises also painfully revealed economics' blind spots. Crucially, economics is not an innocent bystander but central to the problem. In this pioneering book, Patrick Schotanus explains that economics' mechanical worldview is the ontological error which leads to flawed thinking and faulty practices. The Market Mind Hypothesis (MMH) thus calls it "mechanical economics": it not only erroneously views but also dangerously treats the economy as a machine, the market as an automaton, and its agents as robots. Inspired by heterodox economic and leading cognitive thinkers, this book offers an alternative paradigm. Central to MMH's psychophysical worldview is the fact that consumers, investors, and other participants are conscious beings and that their minds' extension makes consciousness a reality in markets, exemplified by market mood. Specifically, denial of the complex mind~matter exchanges as the essence of markets means the extended mind~body problem is economics' elephant in the room. The book argues that if mechanical economics is the answer, we have been asking the wrong questions. Moreover, we will not solve our economic predicaments by doubling down on the assumption of rationality, nor by identifying yet another behavioural bias.

Instead, scholars and students of economics and finance as well as finance practitioners need to investigate—through cognitive economics—the deep links between markets and minds to better understand both. With a foreword by investment strategist Russell Napier, an intermezzo by neuroscientist and complexity pioneer Scott Kelso, and an afterword by 4E cognition philosopher Julian Kiverstein.
