Everything you need to know to restore
or customize your classic Japanese

motorcycle. Whether you want to correctly restore a classic Japanese motorcycle or create a modified, custom build, you need the right information about how to perform the mechanical and cosmetic tasks required to get an old, frequently neglected, and often long-unridden machine back in working order. *How to Rebuild and Restore Classic Japanese Motorcycles* is your thorough, hands-on manual, covering all the mechanical subsystems that make up a motorcycle. From finding a bike to planning your project to dealing with each mechanical system, *How to Rebuild and Restore Classic Japanese Motorcycles* includes everything you need to know to get your classic back on the road. Japanese motorcycles have been the best-selling bikes in the world

since the mid-1960s, driven by the "big four": Honda, Yamaha, Suzuki, and Kawasaki. Of course certain bikes have always had a following - Honda CB750, 305 Hawk, CB400-4, Benly; Suzuki GT750, Katana, GS1000S; Yamaha XS650, RD400 Daytona, TZ; Kawaski H1, H2, Z1R - and these have now become the blue-chip Japanese bikes leading collectors to seek out more common (and now more affordable) alternatives. This is the perfect book for anyone interested in classic Japanese motorcycles, as well as prepping a bike to build a cafe racer, street tracker, or other custom build.

Once upon a time, I watched an episode of Top Gear test three track-day cars. Richard Hammond turned up in a Morgan 3-Wheeler. I had never seen or

heard of the 3-Wheeler before, but I immediately developed an intense need to have one. This book describes my journey. his book is not a set of plans to build your own 3-Wheeler. A set of plans would require you to follow my build exactly, make the same compromises I made, and want exactly what I came up with. This book is, instead, a documentation of the process I went through to build my own 3-Wheeler. I encountered many new problems to solve in building my 3-Wheeler and I hope an examination of how I solved those problems will help you with your project.

Bernt Spiegel's *The Upper Half of the Motorcycle* was a best-selling motorcycling book in its original German with multiple editions and printings to its credit. Now translated into English, its provocative message is available to a wider audience. Spiegel's metaphor considers the rider and the motorcycle as a single unit, the rider being the upper half. Taking a multidisciplinary approach, the author draws on anthropology, psychology, biology, physics, and other disciplines to analyze the theory and function of the man-machine unit. Motorcycle riding is seen

as a junction where people have created machines for personal transport and then become so adept at using them that the machine becomes like an extension of the rider themselves. The ultimate goal for riders is the integration of the man-machine interface and subsequent skill development to the point of virtuosity. Spiegel considers the various aspects of motorcycle riding that must be understood, practiced, and mastered before virtuosity can be attained. Many anecdotes, supplementary material, and in-depth treatment of specialized topics is contained in sidebars and footnotes. Numerous diagrams and photographs illustrate the book's principles allowing the reader to consider and develop their riding skill set.

More than a memoir of a custom cafe racer build this book is a tribute to a teacher who inspired young people to be creative with their minds and capable with their hands. Growing up in Fargo, North Dakota in the 1970s and 80s, The Urban Monk had the opportunity to develop a love for machines, metal working and motorcycles. This book provides a glimpse into what life was like for the author and his young friends in Fargo during that time. It is also a poignant defense of industrial arts education in public schools. After an over three year effort building a custom cafe racer in his spare time and documenting the entire process in videos shared with

the world on his YouTube channel Urban Monk TV, the author tells the story of how this project became more than a custom motorcycle build - it became a tribute to his middle school Metal Shop teacher who inspired him to go on to a life time of peaceful meditation in his garage with a wrench in his hand.

Anyone interested in motorcycles, mechanics, do-it-yourself projects or a historical retrospective of life in 70s-80s Fargo will enjoy this pleasant read.
