A history of past abuses on research with human subjects has led to various sets of rules that are designed to insure ethical practices to protect research subjects appropriately. To understand these rules, it is important to appreciate the significant differences between being a patient, where protecting the best interests of that patient is the primary goal, and being a research subject, where that is generally not the case. In the research setting, there can be a conflict between attempting to answer the research question, and doing what is best for the subject. The rules for conducting research with human subjects attempt to manage this conflict in an ethically acceptable manner. This chapter provides an overview of those rules, including a somewhat extended discussion of the U.S. "Common Rule" as a particular example.

The field of oncology benefits from several large-scale reference books and a host of monographs dedicated to specific cancers. However, truly excellent practice and review books are, surprisingly, quite scarce. Outside of a scant handful of books and online reference tools that offer clinical response practice and board review in a basic question and answer format, there are no resources that offer a robust, engaging, fully referenced tool for these vital activities in every oncologist's and oncology trainee's work. This print and electronic book seeks to fill that void, offering comprehensive question-and-answer style content that covers the entire specialty of oncology and provides practicing oncologists with a fascinating and immediately applicable compendium of vital information dealing with a well-balanced selection of common and uncommon cancers. At the heart of this book is the

editor's and authors' desire to overcome the controversies and barriers to practice that usually emerge following the appearance of new data. In every section, the user is guided toward collaboration in ongoing clinical research - for example, via discussions of well-designed ongoing clinical trials in each specific area. Developed with both the teacher and learner in mind, this book also offers trainees and fellows an excellent opportunity to enhance their preparation for the ABIM oncology fellowship exam as well as for the oncology boards. It will also be an extremely useful tool for oncologists working toward the recertification exam. This comprehensive, beefy book includes hundreds of painstakingly developed multiple-choice and mini-case-based questions covering the principles of medical oncology, malignant hematology, surgical oncology, and radiation oncology. It also contains mini-cases and questions dealing with the biology, diagnosis, classification, staging, and multidisciplinary treatment of cancers at every anatomic site. The very latest topics are included, such as molecular techniques, targeted therapies, and translational cancer research. Concise but detailed answers are referenced to key journals and books, and evidence-based wherever possible. NCCN guidelines are also referenced as appropriate. With its powerful focus on take-home messages from and for actual clinical work, this book will help keep oncologists up to date, bridging the gaps between journal and reference literature, conferences, and their existing knowledge base.

Forests provide many supporting, regulating and cultural services. Extensive environmental changes have resulted in a substantial loss or degradation of forest ecosystem services (ES). Unclear interactions of climate-change phenomena make it difficult to estimate forest ES. Research on interactive effects of climate change and air pollution has become a central issue in forest science during the past decade. Climate change in interaction with air pollution brings novel combinations of severity and timing of multiple stresses, which may significantly affect many forest ES. The aims of the present chapter are to identify basic concepts of evaluating ES with a focus on forest ES, to provide physiological and ecological bases for their evaluation, and to discuss the interactive effects of climate change and air pollution on forest ES based on selected tree physiological functions. Climate regulation mediated by deforestation-induced changes in the hydrological cycle is discussed. Adaptive governance and communication to the public promotes sustainable forest-multi-stakeholder collaboration. A case study is presented evaluating selected ES in a forest-agricultural landscape in the Czech Republic on the basis of monitored energy, water and material flows estimation. From this study, it is apparent that future research must include multi-factorial anthropogenic and natural interactions of climatic changes and air pollution in conjunction with sustainable forest ES provisions. Sustainable forest management is an essential tool for reducing the vulnerability of forests to environmental change.

A monster assembled by a scientist from parts of dead bodies develops a mind of his own as he learns to loathe himself and hate his creator.

Shelley's suspenseful and intellectually rich gothic tale confronts some of the most important and enduring themes in all of literature-the power of human imagination, the potential hubris of science, the gulf between appearance and essence, the effects of human cruelty, the desire for revenge and the need for forgiveness, and much more.
