This collection of essays and reviews represents the most significant and comprehensive writing on Shakespeare's A Comedy of Errors. Miola's edited work also features a comprehensive critical history, coupled with a full bibliography and photographs of major productions of the play from around the world. In the collection, there are five previously unpublished essays. The topics covered in these new essays are women in the play, the play's debt to contemporary theater, its critical and performance histories in Germany and Japan, the metrical variety of the play, and the distinctly modern perspective on the play as containing dark and disturbing elements. To compliment these new essays, the collection features significant scholarship and commentary on The Comedy of Errors that is published in obscure and difficultly accessible journals, newspapers, and other sources. This collection brings together these essays for the first time.

Electric Wiring: Domestic, Tenth Edition, is a clear and reliable guide to the practical aspects of domestic electric wiring. Intended for electrical contractors, installation engineers, wiremen and students, its aim is to provide essential up to date information on modern methods and materials in a simple, clear, and concise manner. The main changes in this edition are those necessary to bring the work into line with the 16th Edition of the Regulations for Electrical Installations issued by the Institution of Electrical Engineers. The book begins by introducing the basic features of domestic installations and explaining power and current ratings, cable and accessory sizes, and circuit protection; and the fitting of switches, fuses, circuit-breakers, etc. Separate chapters deal with the main types of domestic wiring work, including lighting, power, socket-outlets, and the connection of appliances. Fluorescent lighting and 'off-peak' electric heating systems are also covered.

Subsequent chapters discuss the principal wiring systems available for domestic use, including steel and PVC conduit, PVC cable, and the mineral-insulated copper-sheathed system; the earthing requirements and the protective multiple earthing (PME) system which is being more widely applied; and earth-leakage circuit-breakers. The final chapter explains the inspection and tests required on completed installations, including the earth-fault loop-impedance and ring-circuit continuity tests which are now covered in greater detail in the Regulations.

Refrigeration and Air Condition Technician First Year MCQ is a simple e-Book for ITI Course Revised NSQF Syllabus, It contains objective questions with underlined & bold correct answers MCQ covering all topics including all about the latest & Important about safety precautions, marking, sawing, filing, drilling, reaming, tapping and dieing etc. Produce Sheet metal components Identify electrical safety. Join different wire, measure power, currents, volts and earth resistance etc. Connect single phase, 3 phase motors i.e. star and delta connections. Identify the electronic components and their colour code i.e. transistor, capacitor, diode, amplifier, I.C and able to work soldering. Perform gas welding, brazing, soldering observing related safety. Identify RAC tools and equipment and recognize different parts of RAC system. Perform copper tube cutting, flaring, swaging, brazing. Test mechanical & electrical components. Perform leak test, vacuuming, gas charging, wiring & installation of refrigerator. Perform door alignment, door gasket fitting, replace door switch. Test compressor motor terminal, start compressor Direct with relay & without relay, technique of flushing, leak testing, replacing capillary & filter drier, evacuation & gas charging. Check components of frost-free refrigerator (electrical / mechanical), wiring of frost-free freeze & air distribution in refrigerator sector. Leak detection, evacuators & gas charging. Dismantle, repair and assemble hermetic, fixed and variable speed compressor, and test performance. Identify the terminals of sealed compressor and their wiring and measure current, volts, watts and use of DOL starter with different types of motors Perform selection of Hermetic compressor for different appliances, starting methods, testing controls & safety cut out used in sealed compressor. Identify the components of control system of Inverter A.C and wiring of control system Perform servicing & de-scaling of condenser (internals & externals) used in different appliances Perform fitting & adjustment of drier, filter & refrigerant controls used in different refrigeration system. Perform servicing of different evaporator used in different appliances. Carry out Recovery and Recycling of Refrigerant used, alternative of CFC, HFC re-cover, transfer & handling of gas cylinders. Retrofit CFC/HFC machine with ozone friendly refrigerant with understanding of the compatibility. Pack thermal insulation and prevent cooling leakage. Install window AC, test Electrical & electronics components & Fault diagnosis & remedial measures. Perform servicing of electrical & electronic control test, installation, wiring, fault finding & remedial measures of different split AC. Perform servicing of car AC. Fault diagnosis & remedial measures

Heating and Cooling of Air Through Coils combines theory and practice to cover the fundamentals in the processes of heating and cooling of air through coils and the key aspects in the psychrometric chart, the coil fluid piping systems, the coils, and the energy sources for the fluid in the coils. This book covers the integral elements that have a significant impact on the heating and cooling of air through coils, including the coil types, coil tube constructions and arrangements, and fluid flow characteristics in the coils. It also discusses sustainable and renewable energy sources used to heat and cool the fluid flowing in the piping system and the coils. In addition, the book covers the application of coils in central air-conditioning systems and split air-conditioning systems. Presents the fundamentals of heating and cooling of air through coils. Explains the psychrometric chart used for assessing the physical and thermodynamic properties of air in the heating and cooling processes. Covers numerous coil types and constructions. Discusses the key equipment used in the coil fluid piping systems that deliver hot water, steam, condensate, and chilled water to and from the coils.

Considers various energy sources to the fluid in the coil piping system for heating and cooling, including solar heat energy, ocean thermal energy, and geothermal energy. This book will interest engineers and researchers involved in the design and operation of heat exchangers and HVAC systems. It can also be used as a textbook for undergraduate and graduate students majoring in relevant fields, such as thermal and fluids HVAC, and energy management.
