This open access book discusses the current role of smallholders in connection with food security and poverty reduction in developing countries. It addresses the opportunities they enjoy, and the constraints they face, by analysing the availability, access to and utilization of production factors. Due to the relevance of smallholder farms, enhancing their production capacities and economic and social resilience could produce positive impacts on food security and nutrition at a number of levels. In addition to the role of small farmers as food suppliers, the book considers their role as consumers and their level of nutrition security. It investigates the link between agriculture and nutrition in order to better understand how agriculture affects human health and dietary patterns. Given the importance of smallholdings, strategies to increase their productivity are essential to improving food and nutrition security, as well as food diversity.

Experiences from rural development programs in Yemen Cengage Learning

Food and nutrition insecurity is a consequence and a driver of civil conflict. War and civil unrest reduce household incomes and employment opportunities through economic recession; cause losses in people's purchasing power from price inflation; and restrict food availability, access, and utilization through disruption of infrastructure. In turn, low per capita income and poverty, youth unemployment, and social and economic inequality—often combined with poor governance, population pressure, and rough terrain—are factors driving civil conflict. Recently, food and nutrition insecurity has been identified as another main driver of civil conflict globally and even more so in Arab countries.

Specifically, rising international food prices were reported to have significantly increased the incidence of antigovernment demonstrations, riots, and civil conflict in low-income countries in the past.
