**Bioenergetics Quiz Questions and Answers** GRASP IAS

While there is growing evidence of the importance of marine ecosystems for our societies, evidence shows also that pressures from human activities

on these ecosystems are increasing, putting the health of marine ecosystems at stake worldwide. Hence, Blue Economy is becoming an important

component of future socio-economic development strategies (e.g. this is called Blue Growth in Europe), that eventually can result in increasing

pressures at sea, and despite the current regulatory framework (in particular with the Oceans Act, in USA or Canada, and the Marine Strategy

Framework Directive, in Europe), it is likely that this situation will continue in the future. Ensuring all those connected to the sea, directly or indirectly,

gain a better understanding of the importance of the seas, the human-sea interactions and opportunities to act better and reduce impacts from

human pressures, is central to Ocean Literacy (OL). Receiving increasing attention in Europe and USA, OL is a challenge for all parts of society:

educators & trainers, children and professionals, civil society and scientists, consumers and policy/decision makers. It is seen as part of the package

of solutions that will lead to a change in behavior and practice, thus reducing impacts and resulting in healthier marine ecosystems, whilst allowing

development opportunities offered by seas are seized in a sustainable manner. This Research Topic focuses on the issues and options for effective OL

worldwide. It discusses: (1) existing experiences in OL (formal and informal education for children, training for professionals, tools for raising

awareness of consumers - and of investors in the marine sectors...) and their effectiveness (from understanding better to acting differently); (2) the

role OL could play (in interaction with innovation, regulation, economic incentive, social norms...) to support human capital development as key

component of sustainable growth; and (3) pre-conditions for effective OL for different sectors and target groups. Questions relevant to OL include:

Which knowledge - produced by whom - to share and how? Who to target - and how to effectively reach those targeted? How to design OL initiatives -

including by mobilizing those targeted (via living lab approaches e.g.) - to ensure effective OL and pave the way for behavior change? What are the

knowledge gaps that limit our capacity to design effective OL? As scientists, it is likely you have many more questions to offer and discuss.

Insect Biodiversity: Science and Society brings together leading scientific experts to assess the impact insects have on humankind and the earth's

fragile ecosystems. It examines why insect biodiversity matters and how the rapid evolution of insect species is affecting us all. Insects and related

arthropods make up more than 50 percent of the known animal diversity globally, yet a lack of knowledge about insects is hindering the advance of

science and society. This book explores the wide variety in type and number of insect species and their evolutionary relationships. Case studies offer

assessments on how insect biodiversity can help meet the needs of a rapidly expanding human population, and also examine the consequences that an

increased loss of insect species will have on the world. The book concludes that a better understanding of the biology and ecology of insects is the

only way to sustainably manage ecosystems in an ever changing global environment.
