Author Lipton is a former medical school
 professor and research scientist. His
 experiments, and those of other leading-
 edge scientists, have examined in great
 detail the processes by which cells receive
 information. The implications of this
 research radically change our
 understanding of life. It shows that genes
 and DNA do not control our biology; that
 instead DNA is controlled by signals from
 outside the cell, including the energetic
 messages emanating from our positive
 and negative thoughts. Dr. Lipton's
 profoundly hopeful synthesis of the latest
 and best research in cell biology and

quantum physics is being hailed as a breakthrough, showing that our bodies can be changed as we retrain our thinking.
