American Cars, 1973-1980 American Cars, 1973-1980
 From the outbreak of the Cold War to the rise of the United States as the last remaining superpower, the years following World War II were filled with momentous events and rapid change. Diplomatically, economically, politically, and culturally, the United States became a major influence around the globe. On the domestic front, this period witnessed some of the most turbulent and prosperous years in American history. "Postwar America: An Encyclopedia of Social, Political, Cultural, and Economic History" provides detailed coverage of all the remarkable developments within the

United States during this period, as well as their dramatic impact on the rest of the world. A-Z entries address specific persons, groups, concepts, events, geographical locations, organizations, and cultural and technological phenomena. Sidebars highlight primary source materials, items of special interest, statistical data, and other information; and Cultural Landmark entries chronologically detail the music, literature, arts, and cultural history of the era. Bibliographies covering literature from the postwar era and about the era are also included, as are illustrations and specialized indexes.

 The papers in this collection provide important new material on this industry in crisis which is critical to the economies of the U.S., Canada and Mexico. The authors

examine major changes in the industry, and how government policies in the three countries have promoted, protected and shaped it.

Disasters, Accidents, and Crises in American History Taylor & Francis
 For readers who intend to read this volume without reading the first, some introductory remarks are in order about the scope of the work and the strategy used in all five volumes to measure the quality of life. In the first chapter of Volume I, I reviewed the relevant recent literature on social indicators and social reporting, and explained all the general difficulties involved in such work. It would be redundant to repeat that discussion here, but there are some fundamental points that are worth mentioning. Readers who find this account too brief should consult the longer discussion. The basic question that will be answered in this work is this: Is

there a difference in the quality of life in Canada and the United States of America, and if so, in which country is it better? Alternatively, one could put the question thus: If one individual were randomly selected out of Canada and another out of the United States, would there be important qualitative differences, and if so, which one would probably be better. To simplify matters, I often use the terms 'Canadian' and 'American' as abbreviations for 'a randomly selected resident' of Canada or the United States, respectively.

Autonomous State provides the first detailed examination of the Canadian auto industry, the country's most important economic sector, in the post-war period. In this engrossing book, Dimitry Anastakis chronicles the industry's evolution from the 1973 OPEC embargo to the 1989 Canada-US Free Trade Agreement and looks at its effects on public policy, diplomacy, business enterprise, workers, consumers, and firms. Using an immense array of archival sources, and interviews with some of the key actors in the events, Anastakis examines a fascinating array of topics in recent auto industry and Canadian business and economic history: the impact of new safety, emissions, and fuel economy regulations on the Canadian sector and consumers, the first Chrysler bailout of 1980, the curious life and death of the 1965 Canada-US auto pact, the 'invasion' of Japanese imports and transplant operations, and the end of aggressive auto policy-making with the coming of free trade. More than just an examination of the auto industry, the book provides a rethinking of Canada's tumultuous post-OPEC political and economic evolution, helping to explain the current tribulations of the global auto sector and Canada's place within it.

Essential MG tells the full story of this well loved sports car from its early days, covering developments in style, increases

in power, and its history in racing and speed trials. The first MG cars were produced in Oxford, England, in 1924. The car was instantly appealing, with a cheekiness of spirit that would characterize the marque all of its life, winning the hearts of millions around the globe, not least in the United States. The price was as attractive as the styling and the performance. It was cheap and it was fun, quintessential MG traits.

From electric cars to recycling to organic food--it's all here! Uncle John puts a green spin on its fun facts, figures and trademark trivia. Only Uncle John could make the Green Movement this much fun! This timely edition takes an even-handed look at the trials and tribulations (and downright goofiness) of environmentalism. You'll learn how landfills operate, where plastic goes to die, how to understand food labels, how to save some green around the house, and the lowdown on all the alternative forms of energy currently being bandied about (even beer power). And we cover the really important stuff, such as: Who has the bigger carbon footprint--Fred Flintstone or George Jetson? And lots more, including... * Lady Bird Johnson's quest for a prettier nation * Whatever happened to the electric car? * Paper vs. plastic: A fight to the death * Not-so-green Hollywood movies * The true meaning of "organic" * Ancient environmentalists * Living on an Amish farm * NOISE POLLUTION! * Animals that recycle * The power of poo And much, much more!

Energy supply problems for the long run have not been solved according to John Blackburn, and they will reappear when the present temporary glut in the oil market ends. Now is the time, Blackburn argues, to plan an orderly transition to a sustainable energy future—before another crisis looms.

Americans tried to fix the world and neglected the home front, resulting in failure at both ends. Ignorance became fashionable and opportunistic polymorphous predators, parasites, and false prophets took advantage of the situation. It is hard to believe how far the nation fell into violent interracial melodramas, political mediocrity, incivility, and confusion. There is no agreement on what is good and evil. Everything is relative, ugly and pretty, real and false, right and wrong. American society suffers from a lack of coherence and consistency, and such a heavy burden of illogical nonsense that it can no longer handle all the contradictions. We are unaware of where we are going

Auto Situation, 1980 McFarland

Constructs an analytical framework of production politics within which to address such phenomena as the erosion of wages and lost of good jobs in the US in the 1980s, the emulation by US companies of production methods from elsewhere, and differences and similarities between Japanese and German industrial relations. Narrowing the study to the automobile industry, argues that variations in labor's fortunes and competitive success can be explained by distinct patterns of labor inclusion in corporate decision making.

In early 2000, the Center for the Study of the Presidency organized a group of eminent scholars to examine key cases of Presidential success and failure and the lessons learned. Leading presidential researchers and writers provided 76 case

studies organized in nine broad subject areas. After surveying the broad sweep of presidential concerns, the scholars examine the First One Hundred Days of an Administration from FDR onward. They then review Executive-Legislative Relations, Domestic Policy, Fiscal Policy and International Economics, National Security Institutions and Decision Making, Foreign Interventions and Interactions, Managing the Executive Branch, Presidential Continuity: The Use of Individuals Across Administrations; and Presidential Crises: Watergate, Iran-Contra, and Impeachment. Must reading for executive branch figures and scholars, researchers, and the interested public concerned with presidential issues and American political history.

The period between the close of the Kennedy Round and the opening of the Uruguay Round replaced a decade of fast growth in world output and trade - and of prevailing harmony in trade relations across the Atlantic - with twenty years of currency and trade turmoil and strains between the US and the EC. Giuseppe La Barca provides a comprehensive account of these trade developments and the

measures adopted by the US and the EC to cope with them; in doing so, he draws a wider picture of international trade policy-making during the period. The aftermath of the Kennedy Round witnessed the undoing of the Bretton Woods regime, but the consequent overheating of the world economy resulted in an acceleration of international trade while settlement in the currency area contributed to the launching of the Tokyo Round negotiations. The first oil shock heralded an unprecedented slump along with a jump in unemployment and inflation rates. The Tokyo Round resulted only in a first step in eliminating non-tariff barriers, leaving contentious issues between the two transatlantic trading partners unsettled. The second oil shock led to growing calls for protectionism and unilateralism particularly in the US, and the Reagan administration pressed for the launch of the Uruguay Round only partially supported by the EC. Providing an in-depth analysis of trade developments involving the two most important economic actors, and placing these developments in a multilateral, international context, this book offers new insights to scholars of economic history and international political economy.
