Proceedings of the 2nd International Conference on Advanced Technologies for Societal Applications - Volume 1 Tolley

This book is a compilation of recent global measures to conserve bio-resources and manage biotic and abiotic stresses. It highlights emerging issues related to agriculture, abiotic and biotic stress factors, ethnic knowledge, climate change and global warming, as well as natural resources and their sustainable management. It also focuses on the

consolidated efforts of scientists and academics engaged in addressing a number of issues related to resource management and combating stresses in order to protect the Earth. Crop production and productivity have been significantly improved, however, there have been no corresponding practical advances in sustainable agriculture. This book offers a wide range of affordable approaches to managing bio-resources with a focus on sustainability. Lastly, it describes research highlights and future areas of research.

Introduction to Python Programming CRC Press

This volume of the navy's history covers the period from 1976 to 1990. It examines the navy's success in keeping abreast of advances in technology in

step with progressive self-reliance. In a decade and a half of innovation, the navy equipped its indigenously built frigates, corvettes, and other vessels with combinations of the latest available weapons and equipment from the Soviet Union, from Europe, and from indigenous sources. A tiny "ship design cell," which in 1965 was designing yard craft, was by 1990 designing an aircraft carrier, submarines, and missile destroyers. The new acquisitions from the Soviet Union ranged from missile destroyers, conventional submarines, and long-range reconnaissance aircraft, to minesweepers. All these high-tech inductions needed to be operated and manned by better-educated and better-trained personnel. New maintenance, repair, and refit facilities had to be

created. The increase in the volume of spares and the diversity of sources compelled modernization of the logistics system. This volume analyzes how these problems were tackled.

This work has been selected by scholars as being culturally important and is part of the knowledge base of civilization as we know it. This work is in the public domain in the United States of America, and possibly other nations. Within the

United States, you may freely copy and distribute this work, as no entity (individual or corporate) has a copyright on the body of the work. Scholars believe, and we concur, that this work is important enough to be preserved, reproduced, and made generally available to the public. To ensure a quality reading experience, this work has been proofread and republished using a format that seamlessly blends the original graphical elements with text in an easy-to-read typeface. We appreciate your support of the preservation process, and thank you for being an important part of keeping this knowledge alive and relevant.

One of this century's most significant events, China's maritime transformation is already making waves. Yet China's course and its implications, including at sea, remain highly uncertain—triggering intense speculation and concern from many quarters and in many directions. It has never been more important to assess what ships China can supply its navy and other maritime forces with, today and in the future. China's shipbuilding industry has grown more rapidly than any other in modern history. Commercial shipbuilding output jumped thirteen-fold from 2002-12. Beijing has largely met its goal of becoming the

world's largest shipbuilder by 2015. Yet progress is uneven, with military shipbuilding leading overall but with significant weakness in propulsion and electronics for military and civilian applications alike. Moreover, no other book has answered three pressing questions: What are China's prospects for success in key areas of naval shipbuilding? What are the likely results for China's navy? What are the implications for the U.S. Navy? To address these critical, complex issues, this volume brings together some of the world's leading experts and linguistic analysts, often pairing them in research teams. These sailors, scholars, analysts, industry experts, and other professionals have commanded ships at sea, led shipbuilding programs ashore, toured

Chinese vessels and production facilities, invested in Chinese shipyards and advised others in their investment, and analyzed and presented important data to top-level decision-makers in times of crisis. In synthesizing their collective insights, the book fills a key gap in our understanding of China, its shipbuilding, its navy, and what it all means. Their findings will fascinate and concern you. While offering different perspectives, they largely agree on several important points. Through a process of “imitative innovation,” China has been able to “leap frog” some naval development, engineering, and production steps and achieve tremendous cost and time savings by leveraging work done by the U.S. and other countries. China’s shipbuilding industry is poised to make

the PLAN the second largest Navy in the world by 2020, and—if current trends continue—a combat fleet that in overall order of battle (i.e., hardware-specific terms) is quantitatively and even perhaps qualitatively on a par with that of the U.S. Navy by 2030. Already, Chinese ship-design and -building advances are helping the PLAN to contest sea control in a widening arc of the Western Pacific. China continues to lack transparency in important respects, but much is knowable through the interdisciplinary research approach pioneered by the Naval War College China Maritime Studies Institute in the series “Studies in Chinese Maritime Development,” of which this is the sixth volume.

Measurement of Crystal Growth and

Nucleation Rates KK LEE MATHEMATICS
Nitrogen in the Environment: Sources, Problems, and Management is the first volume to provide a holistic perspective and comprehensive treatment of nitrogen from field, to ecosystem, to treatment of urban and rural drinking water supplies, while also including a historical overview, human health impacts and policy considerations. It provides a worldwide perspective on nitrogen and agriculture. Nitrogen is one of the most critical elements required in agricultural systems for the production of crops for feed, food and fiber. The ever-increasing world population requires increasing use of nitrogen in agriculture to supply human needs for dietary protein. Worldwide demand for nitrogen will increase as a direct

response to increasing population. Strategies and perspectives are considered to improve nitrogen-use efficiency. Issues of nitrogen in crop and human nutrition, and transport and transformations along the continuum from farm field to ground water, watersheds, streams, rivers, and coastal marine environments are discussed. Described are aerial transport of nitrogen from livestock and agricultural systems and the potential for deposition and impacts. The current status of nitrogen in the environment in selected terrestrial and coastal environments and crop and forest ecosystems and development of emerging technologies to minimize nitrogen impacts on the environment are addressed. The nitrogen cycle provides a framework for

assessing broad scale or even global strategies to improve nitrogen use efficiency. Growing human populations are the driving force that requires increased nitrogen inputs. These increasing inputs into the food-production system directly result in increased livestock and human-excretory nitrogen contribution into the environment. The scope of this book is diverse, covering a range of topics and issues from furthering our understanding of nitrogen in the environment to policy considerations at both farm and national scales.

Innovations in Smart Cities Applications
Volume 5 Springer Science & Business Media

A bestselling classic reference, now expanded and updated to cover the

latest instrumentation, methods, and applications The Second Edition of Fourier Transform Infrared Spectrometry brings this core reference up to date on the uses of FT-IR spectrometers today. The book starts with an in-depth description of the theory and current instrumentation of FT-IR spectrometry, with full chapters devoted to signal-to-noise ratio and photometric accuracy. Many diverse types of sampling techniques and data processing routines, most of which can be performed on even the less expensive instruments, are then described. Extensively updated, the Second Edition: * Discusses improvements in optical components * Features a full chapter on FT Raman Spectrometry * Contains new chapters that focus on different ways of

measuring spectra by FT-IR spectrometry, including fourteen chapters on such techniques as microspectroscopy, internal and external reflection, and emission and photoacoustic spectrometry * Includes a new chapter introducing the theory of vibrational spectrometry * Organizes material according to sampling techniques Designed to help practitioners using FT-IR capitalize on the plethora of techniques for modern FT-IR spectrometry and plan their experimental procedures correctly, this is a practical, hands-on reference for chemists and analysts. It's also a great resource for students who need to understand the theory, instrumentation, and applications of FT-IR.

Kinetics of Industrial Crystallization

Peter Lang Pub Incorporated

This book sets the innovative research contributions, works, and solutions for almost all the intelligent and smart applications in the smart cities. The smart city concept is a relevant topic for industrials, governments, and citizens. Due to this, the smart city, considered as a multi-domain context, attracts tremendously academics researchers and practitioners who provide efforts in theoretical proofs, approaches, architectures, and in applied researches. The importance of smart cities comes essentially from the significant growth of populations in the near future which conducts to a real need of smart applications that can support this evolution in the future cities. The main scope of this book covers new and

original ideas for the next generations of cities using the new technologies. The book involves the application of the data science and AI, IoT technologies and architectures, smart earth and water management, smart education and E-learning systems, smart modeling systems, smart mobility, and renewable energy. It also reports recent research works on big data technologies, image processing and recognition systems, and smart security and privacy.

Nitrogen in the Environment: Sources, Problems and Management Naval Institute Press

Introduction to Python Programming is written for students who are beginners in the field of computer programming. This book presents an intuitive approach to the concepts of Python Programming for

students. This book differs from traditional texts not only in its philosophy but also in its overall focus, level of activities, development of topics, and attention to programming details. The contents of the book are chosen with utmost care after analyzing the syllabus for Python course prescribed by various top universities in USA, Europe, and Asia. Since the prerequisite knowledge varies significantly from student to student, the book's overall overture addresses the challenges of teaching and learning of students which is fine-tuned by the authors' experience with large sections of students. This book uses natural language expressions instead of the traditional shortened words of the programming world. This book has been written with the goal to

provide students with a textbook that can be easily understood and to make a connection between what students are learning and how they may apply that knowledge. Features of this book This book does not assume any previous programming experience, although of course, any exposure to other programming languages is useful This book introduces all of the key concepts of Python programming language with helpful illustrations Programming examples are presented in a clear and consistent manner Each line of code is numbered and explained in detail Use of f-strings throughout the book Hundreds of real-world examples are included and they come from fields such as entertainment, sports, music and environmental studies Students can

periodically check their progress with in-chapter quizzes that appear in all chapters

Digital forensics has recently gained a notable development and become the most demanding area in today's information security requirement. This book investigates the areas of digital forensics, digital investigation and data analysis procedures as they apply to computer fraud and cybercrime, with the main objective of describing a variety of digital crimes and retrieving potential digital evidence. Big Data Analytics and

Computing for Digital Forensic Investigations gives a contemporary view on the problems of information security. It presents the idea that protective mechanisms and software must be integrated along with forensic capabilities into existing forensic software using big data computing tools and techniques. Features Describes trends of digital forensics served for big data and the challenges of evidence acquisition Enables digital forensic investigators and law enforcement agencies to enhance their digital investigation capabilities with the application of data science analytics, algorithms and fusion technique This book is focused on helping professionals as well as researchers to get ready with next-generation security systems to

mount the rising challenges of computer fraud and cybercrimes as well as with digital forensic investigations. Dr Suneeta Satpathy has more than ten years of teaching experience in different subjects of the Computer Science and Engineering discipline. She is currently working as an associate professor in the Department of Computer Science and Engineering, College of Bhubaneswar, affiliated with Biju Patnaik University and Technology, Odisha. Her research interests include computer forensics, cybersecurity, data fusion, data mining, big data analysis and decision mining. Dr Sachi Nandan Mohanty is an associate professor in the Department of Computer Science and Engineering at ICFAI Tech, ICFAI Foundation for Higher Education, Hyderabad, India. His

research interests include data mining, big data analysis, cognitive science, fuzzy decision-making, brain-computer interface, cognition and computational intelligence.

Big Data Analytics and Computing for Digital Forensic Investigations CRC Press Includes 40 SAE technical papers, published from 2007 through 2010, that describe the latest research on automotive electronics reliability technology. This book will help engineers and researchers focus on the design strategies being used to minimize electronics reliability problems, and how to test and verify those strategies.

vital to the social, physical, cognitive, and spiritual development of children. Learn the seven meaningful experiences we should provide children with every day and why they are so important.

Tolley's Tax-Link Harvard Business Press Field Guide to the Orchids of Europe and the Mediterranean is a comprehensive manual that pairs thousands of color photographs with expert guidance, making it easy for readers to identify the varied orchid species of this region. The authors bring decades of field and research experience to this project and combine their first-hand knowledge with the latest scientific research, making this the most thorough and up-to-date book available. The book covers orchids from Europe and the Mediterranean, as well as areas in Turkey and the immediate

near east of North Africa and Macaronesia. It includes thirty genera and their species including *Ophrys*, *Cypripedium*, *Orchis*, *Dactylorhiza*, *Epipactis*, and *Serapias*, as well as seventy natural hybrids. The authors emphasize the natural variability that exists in many wild species and work to eliminate the confusion that can arise due to the morphological variation. Each species includes multiple images to illustrate this diversity as well as notes on distinguishing features and distribution maps. Common names and important synonyms accompany each species alongside notes on habitat, flowering times, and distinguishing features.

Transition to Eminence Springer

The first major study of the idea of

repentance, or *tawba*, in Islam. This book offers the first extensive treatment in a European language of *tawba* in Islam. Conventionally translated as “repentance,” *tawba* includes the broader sense of returning to God. Khalil examines this wider notion in the early period of Sufism with a particular focus on the formative years of the tradition between Muḥāsibī and Abū Ṭālib al-Makkī. Beginning with an extensive survey of the semantic field of the term as outlined in Arabic lexicography, Khalil offers a detailed analysis of the concept in Muslim scripture. He then examines *tawba* as a complex psychological process involving interior conversion and a complete, unwavering commitment to the spiritual life. The ideas of a number of prominent figures from the first few

centuries of Islam are used to illuminate the historical development of tawba and its role in early praxis-oriented Sufism. “In this exemplary study, Khalil lays bare the contours of the key concept of repentance in the spiritual psychology of early Islam with admirable sensitivity and ease—a remarkable achievement.” — Ahmet T. Karamustafa, author of *Sufism: The Formative Period* “Atif Khalil’s *Repentance and the Return to God* is an illuminating account of the idea of tawba as attested to in the early Sufi literature from the ninth through the tenth centuries. Starting with a painstaking semantic examination of the Qur’ānic passages related to repentance from sin and turning to God in remorse and search of pardon, the author traces the development of these motifs from

early Sufi didactic adages to their subsequent rearticulation in the sophisticated psychological discourses of such major lights of classical Sufism such as al-Muḥāsibī, Sahl al-Tustarī, al-Kharrāz, al-Junayd, and Abū Ṭālib al-Makkī. A must read for both lay readers interested in comparative mysticism/religions and specialists on Islam, Sufism, and Islamic spiritual and intellectual history.” — Alexander Knysh, author of *Islamic Mysticism: A Short History* and *Sufism: A New History of Islamic Mysticism*

At My Father's Wedding IChemE

This book, divided in two volumes, originates from Techno-Societal 2018: the 2nd International Conference on Advanced Technologies for Societal Applications, Maharashtra, India, that

brings together faculty members of various engineering colleges to solve Indian regional relevant problems under the guidance of eminent researchers from various reputed organizations. The focus is on technologies that help develop and improve society, in particular on issues such as the betterment of differently abled people, environment impact, livelihood, rural employment, agriculture, healthcare, energy, transport, sanitation, water, education. This conference aims to help innovators to share their best practices or products developed to solve specific local problems which in turn may help the other researchers to take inspiration to solve problems in their region. On the other hand, technologies proposed by expert researchers may find applications

in different regions. This offers a multidisciplinary platform for researchers from a broad range of disciplines of Science, Engineering and Technology for reporting innovations at different levels.

Biology 12 Lancer Publishers

Discusses the impact on men of a father's abandonment and explains how men can develop a masculine model to help overcome the inability to commit, give, receive, and express feelings
Reclaiming Our True Masculinity Bantam
Flexibility is as acceptable an objective for today's industrial community as is automation. Thus, the title of this conference proceedings volume - Flexible Automation - reflects an added emphasis to the usual industrial automation. As with general automation

that has impacted every component of the manufacturing office and plant, the identity of flexible automation can possess various forms and functions. The papers in this volume have been grouped into two main categories. One category deals with implementation of so-called "intelligent manufacturing". This means use of algorithmic methods and artificial intelligence approaches to various problems encountered in practical factory automation tasks. The placement of papers into five chapters of this part cannot be very precise, due to multidisciplinary nature and constant rapid change of the field. The categories are arranged starting from problems of enhancement of current factory settings, and followed by the papers addressing more specific issues of production

planning, process technology and product engineering. The fifth chapter contains papers on the very important aspects of factory automation - problems of design, simulation, operation and monitoring of manufacturing cells. Chinese Naval Shipbuilding Gulf Professional Publishing Electrical Engineer's Reference Book, Fourteenth Edition focuses on electrical engineering. The book first discusses units, mathematics, and physical quantities, including the international unit system, physical properties, and electricity. The text also looks at network and control systems analysis. The book examines materials used in electrical engineering. Topics include conducting materials, superconductors, silicon, insulating materials, electrical steels,

and soft irons and relay steels. The text underscores electrical metrology and instrumentation, steam-generating plants, turbines and diesel plants, and nuclear reactor plants. The book also discusses alternative energy sources. Concerns include wind, geothermal, wave, ocean thermal, solar, and tidal energy. The text then looks at alternating-current generators. Stator windings, insulation, output equation, armature reaction, and reactants and

time-constraints are described. The book also examines overhead lines, cables, power transformers, switchgears and protection, supply and control of reactive power, and power systems operation and control. The text is a vital source of reference for readers interested in electrical engineering.
