Great Writing VHDL: Programming by Example

* Teaches VHDL by example * Includes tools for simulation and synthesis * CD-ROM containing Code/Design examples and a working demo of ModelSIM

MWV

Great Writing bridges the gap from ESL writers to mainstream writers! The Great Writing series uses clear explanations and extensive practical activities to help students write great sentences, paragraphs, and essays. Each book contains a wide variety of writing models in carefully selected rhetorical styles that provide practice in working with the writing process to develop a final piece of writing. * An all-new level, Great Writing Foundations introduces students to the basics of sentence structure, grammar, spelling and vocabulary for writing.* Impactful National Geographic images open every unit and help to stimulate student writing.* Updated "Grammar for Writing" sections help students apply target structures to the writing goals.* "Building Better Vocabulary" activities highlight words from the Academic Word List and encourage students to use new words in their writing.* Student writing models help students focus on specific writing skills and multiple rhetorical structures

The Systematic Review Group (SRG) is a new division of the research department of European

Society of Intensive Care Medicine (ESICM). The aims of the SRG are to promote evidence based medicine in critical care, to enhance the role of systematic reviews and meta-analyses in everyday practice and to facilitate access to such evidence for clinicians. It has been estimated that a health care professional would need to read 17-20 original articles every day in order to keep up-to-date in their field. Thus the role of systematic reviews in gathering the evidence, informing guidelines and helping professionals keep abreast of their field has been increasingly recognised. The ESICM Clinical Evidence in Intensive Care handbook was compiled with this in mind. 60 systematic reviews on topics directly relevant to critical care were selected. Most of the reviews are of high quality and published since 2009. Indeed, it is thought that a systematic review remains accurate for 2 years on average, and therefore has to be updated at the very least every other year. For each of these SRs, we have provided the readers with a summary highlighting the context of the review, its main findings, review authors' conclusions, problems and limitations, and advantages. In addition, we analysed the methodological quality of the systematic review on 11 items based on the AMSTAR (assessment of multiple systematic reviews) tool. For the majority of the systematic reviews, a forest plot of the primary or other relevant outcomes is included. Most of the reviews also have commentaries from experts in the field highlighting the validity and robustness of the data, whether or not they should translate into changes in routine practice, and what should be the next steps for research. Where relevant, additional information has been provided such as: details of recently completed trials or further references.
