 "Universities and colleges often operate between two worlds: higher education and economic systems. It is impossible to understand how current developments are affecting colleges without attending to the changes in both the higher education system and in the economic communities in which they exist. W. Richard Scott, Michael W. Kirst, and colleagues focus on the changing relations between colleges and companies in one vibrant economic region: the San Francisco Bay Area. Colleges and tech companies, they argue, have a common interest in knowledge generation and human capital, but they operate in social worlds that substantially differ, making them uneasy partners. Colleges are a part of a long tradition that stresses the importance of precedent, academic values, and liberal education. High-tech companies, by contrast, value innovation and know-how, and they operate under conditions that reward rapid response to changing opportunities. The economy is changing faster than the postsecondary education system."--The cover.

The Art of Music Production is the first book to comprehensively analyze and describe the role of the music producer in creating successful music recordings. Now in its fourth edition, it is the definitive guide to the art and business of music production. Author and producer Richard James Burgess distills this complex field by defining the distinct roles of a music producer. The first part of the book outlines the underlying theory of the art of music production. The second focuses on the job's practical aspects, including training, getting into the business, and--most importantly--the musical, financial, and interpersonal relationships producers have with artists and their labels. The book is packed with insights from successful music producers, ranging from the beginnings of recorded sound to today's chart-toppers and across genre lines. It features many revealing anecdotes, encompassing both the daily and overarching career-related challenges that a producer faces. Burgess addresses the changes in the nature of music production brought about by technology and, in particular, the millennial shift that has occurred with digital recording and distribution. His lifelong experience in the recording industry as a studio musician, artist, composer, producer, manager, and marketer, combined with his extensive academic research in the field, brings a unique breadth and depth of understanding to the topic.
