ASP - Active Server Pages. ASP is a development framework for building web pages AND IT supports many different development models: Classic ASP. ASP.NET Web Forms. With ASP Classic, default VBScript language can be used. ASP Classic files have .asp extension and are interpreted when the page is loaded or during runtime. Compiled ASP.NET files have .aspx extension making them more robust and faster than ASP scripting. The code of ASP and ASP.NET code is similar but it is not readily interchangeable. However, the pages of ASP.NET may still have some ASP scripting. As you read the book, you will find the answers to many of the questions you have about two of the Internet Programming Tools - Active Server Pages. This book is a sincere effort for explaining the concepts of Internet Programming tools - ASP. We sincerely hope that you find this work to be informative and enjoyable. The purpose of this book is to give the novice and the professional web designer a concise introduction to the features and use of ASP technology. The book does not assume that the reader has a programming background. The content, by design, emphasizes the “learning by doing” approach. The scripting languages that are used in the text include HTML, VBScript, Visual Basic and JScript. The text includes projects about database-driven websites, design of web forms, Ad Rotator implementations and the creation of COM components. The projects also include the use of application and session objects as well as cookies. You will study enough about ASP technology to understand what you are doing and will gain an understanding of ASP programming components by using them. After you complete the assignments in this book, you will be able to adapt many of them for your own website. The projects are designed to work with both Windows 98 and Windows 2000.
