Most studies of doing business at the "bottom of the economic pyramid" focus on viewing the poor as consumers, as micro-entrepreneurs, or as potential

employees of local companies. Almost no analysis focuses on the poor as primary producers of agricultural commodities a striking omission given that primary producers are by far the largest segment of the working-age population in developing economies. Making Markets More Inclusive bridges the management literature with original research on agricultural value chains in

developing and emerging economies. This exciting work is the first to delve into the skills, capabilities, strategies and approaches needed for inclusive value chain development. McKague shows how NGOs and companies can connect poor producers in developing economies with the right markets to better create social and economic impact. He also analyzes one of the leading agricultural value chain initiatives in the world, which is being replicated by the Bill and Melinda Gates Foundation in several different value chains in Malawi, Tanzania, Ghana, India, and Mali. Want more? Check out these compelling videos, which provide a glimpse into the stories and examples used throughout the book. Video Trailer for Making Markets More Inclusive.

Farmer Training. Kallani Rani increased the productivity of her cows, become a cattle feed seller in her village (Chapter 6), and opened a fresh milk canteen in her local market (Chapter 7). She now trains other women farmers and works to improve opportunities for women in her community (Chapter 5). Animal Health Care Services. Asma Husna trained to be an animal health worker with CARE to provide important animal health services and education to local farmers on a fee-for-service basis (Chapter 6). Cattle Feed Shops. Fulera Akter started a business as a cattle feed seller after demand for nutritional animal feed grew due to farmers' improved knowledge of nutrition (Chapter 6). Savings Groups. Coauthor Muhammad Siddiquee, the Coordinator of Agriculture

and Value Chain Programs at CARE Bangladesh, discusses the value of farmer savings groups (Chapter 6). Milk Collection. Sarothi Rani became a milk collector to earn an improved income for her family and provide an important service to other dairy farmers in her community (Chapter 7). Digital Fat Testing. Introducing digital fat testing machines into the dairy value chain helped reward farmers for making investments in producing higher quality milk, as well as ensuring transparent and timely payments (Chapter 7). Microfranchising. Supporting agricultural input shop owners with training, relationships to suppliers, common branding, and standardized customer services improves the productivity of smallholder farmers and the profitability

of shops (Chapter 12). Bangladesh Dairy Value Chain Learning. Reflections from some of the 40 CARE staff from 17 countries who came to Bangladesh to learn from the experience of the dairy value chain project (Chapter 15). Arihant Publications India limited Comparison of six successful development projects in developing countries - discusses project design, financing, institutional framework, etc., relating to primary education and agricultural projects, family planning and health service programmes in South East Asia, Kenya, Mexico and China; attributes their success to managerial and institutional innovations, decentralization, the commitment of political leadership and efficient project management. Diagrams, organigrams

and references.

Bulletin Westview Press

If you find yourself bewildered by innumerable variants of cheese, flavored yogurts, ice creams or UHT milk, in an expansive section of a modern retail store, then assume that you have hit the much evolved dairy section. Gone are the days when shopping of dairy products just meant choosing between plain curd or Cottage Cheese or basic sandwich spread, today dairy products have outdone their first forms and evolved into much urbanized and modern consumer centric products. To establish a better understanding of market potential of the evolved dairy products in India, Niir Project Consultancy Services has released a new study titled 'Market Research Report on

Milk Processing & Dairy Products in India (Butter, Yogurt, UHT Milk, Cheese, Ice Cream, Ghee & Other Products) - Market Prospects, Present Scenario, Growth Drivers, Demand-Supply Statistics, Industry Size, Sector Outlook, Analysis & Forecasts upto 2017'. The report identifies the current & future market prospects of dairy products, the value drivers that will trigger the growth, opportunities & challenges faced by the sector coupled with government initiatives and porters 5 forces analysis of the industry. It helps you classify dairy industry on the basis of its business attractiveness and investment potential which can prove to be a vital link in prudent business decision making. The report provides a comprehensive analysis of the dairy products sector

along with the financial details of dairy products companies. It begins by a brief on global dairy sector and then proceeds to discuss the Indian scenario of dairy industry in detail. It discusses the present scenario, structure and classification of the industry while defining the scope of the report. The sector has moved away from large consumption of milk in unprocessed and fluid form to higher intake of processed dairy products. The known factors for such rising preference for processed dairy products include growing disposable incomes, urbanization, spiraling trend of modern retail and growing acceptability of processed products. The report analyzes the above mentioned factors in growth drivers section supported by graphical

representation and forecasts of data points. Growing population of middle class households pose immense opportunities for a host of consumer industries; dairy being one of them. With higher incomes in their pockets and growing western influence on their taste buds, Indian middle class is well equipped to experiment with new products which will have a domino effect on the consumption of dairy products. Also, growing health consciousness among Indian population, low per capita consumption of various dairy products and rising food expenditure will provide ample opportunities for dairy players to seize. Further the report discusses various impediments faced by the dairy players while operating in the industry. The report in its entirety can prove to be

an indispensable tool for assessing the market potential of dairy products in India. It analyzes the demand supply situation in the industry from different angles to enable better understanding of the topic. Demand for dairy products in India is captured by determining the demand for various dairy products as well as total exports. Similarly supply side is taken into account by assessing the production of milk in the country and population of milch animals, the production of various dairy products and lastly by scrutinizing the capital expenditure projects announced in the industry. Moving forward, the report analyzes the attractiveness of the sector by evaluating the status of porters 5 forces prevalent in the industry. Any sector is said to be most attractive when

the 5 forces are at their weakest and the report explicates the forces methodically to simplify the analysis. It also lists various initiatives undertaken by the Indian government to assist dairy industry as a whole. Lastly to give a fair view of the competition in the industry, the report shares information about players operating in the dairy sector. It gives business profiles of key players like Amul, Parag Milk Foods Ltd, Kwality Ltd and Mother Dairy Fruit & Vegetable Ltd. The next segment provides complete financial details of dairy players in the country like address of registered office, director's name and financial comparison covering balance sheet, profit & loss account and several financial ratios of the players. The report ends with a promising outlook of the

sector. Indian dairy industry has been at the forefront with impressive growth rates and immense potential for an effervescent future abetted by rising demand for value added dairy products in the country. Fluid milk market in India has reached a saturation point and the growing acceptance of value added dairy products has brought winds of change for the industry. The Indian market has witnessed a spur in the demand of value added dairy products like cheese, yogurt, packaged milk and probiotic drinks which has invigorated the growth in overall dairy industry. Rising western influence on Indian food habits, rising concerns about quality of dairy products, health consciousness and spiraling disposable incomes of consumers have resulted in higher demand for value

added dairy products in India. Gauging the high demand potential in dairy products industry, a host of international and domestic players have set their foot in the Indian dairy domain. The share of milk processed in total milk produced has shown a healthy rise in the last 3-4 years. We anticipate the quantity of milk processed to cross 107 million tonnes by 2017 from ~66 million tonnes in 2013. Also we expect Indian dairy market to touch INR 6971 billion levels by 2017. Reasons for Buying this Report: • This research report helps you get a detail picture of the industry by providing overview of the industry along with the market definition, structure and its classification • The report provides in-depth market analysis covering major growth driving factors for the industry

and opportunities & challenges prevalent

- This report helps to understand the present status of the industry by elucidating a comprehensive porter 5 force analysis and scrutiny of the demand – supply situation
- Report provides analysis and in-depth financial comparison of major players/competitors
- The report provides forecasts of key parameters which helps to anticipate the industry performance

Our Approach:

- Our research reports broadly cover Indian markets, present analysis, outlook and forecast for a period of five years.
- The market forecasts are developed on the basis of secondary research and are cross-validated through interactions with the industry players
- We use reliable sources of information and databases. And information from such sources is

processed by us and included in the report

Economic and Political Weekly Oxford University Press, USA

Agricultural cooperatives and producer organizations are institutional innovations which have the potential to reduce poverty and improve food security. This book presents a raft of international case studies, from developing and transition countries, to analyse the internal and external challenges that these complex organizations face and the solutions that they have developed. The contributors provide an increased understanding of the transformation of traditional community organizations into modern farmer-owned businesses. They cover issues including: the impact on rural

development and inclusiveness, the role of social capital, formal versus informal organizations, democratic participation and member relations, and their role in value chains. Students and scholars will find the book's multidisciplinary approach useful in their research. It will also be of interest to policy-makers seeking to understand the wide diversity of organizational forms and functions. NGOs, donors and governments seeking to support rural developments will benefit from the discussions raised in this book.

Rising concerns about agricultural productivity and food security in rapidly changing economic and environmental contexts have led to renewed interest in agricultural development. But the extent to which new policies and programs will enable socially just and environmentally sustainable futures for rural communities remains a matter of intense debate. This

book contributes to such debates by critically examining the intersection of agricultural histories, heterogeneous social contexts and new technological developments in rural communities across the Global South. It shows how experiences of the previous Green Revolution can inform new agricultural programs and enable equitable and participatory development in rural places. Through close engagement with rural communities, this book ensures that rural voices become part of the debate on agricultural development and suggests pathways for building on the gains of the Green Revolution without necessarily repeating its problematic social, technological and environmental aspects. This book was published as a special issue of the International Journal

of Agricultural Sustainability.
