Offering a balanced approach to problem-solving issues in a complex and changing world, this book focuses specifically on the subject of problem solving in policing. Featured selections include chapters on domestic security, disorderly youth, auto theft, prostitution, gang delinquency and crime in public housing. Other notable selections discuss the role of supervising police personnel engaged in problem solving, advances in using this approach in criminal investigations, solving serial crimes, preparing for terrorism, and developing patrol officers as effective first responders to active violence.

Bringing together interconnected discussions to make explicit the complexity of the Arctic region, this book offers a legal discussion of the ongoing territorial disputes and challenges in order to frame their impact into the viability of different governance strategies that are available at the national, regional and international level. One of the intrinsic features of the region is the difficulty in the determination of boundaries, responsibilities and interests. Against this background, sovereignty issues are intertwined with environmental and geopolitical issues that ultimately affect global strategic balances and international trade and, at the same time, influence national approaches to basic rights and organizational schemes regarding the protection of indigenous peoples and inhabitants of the region. This perspective lays the ground for further discussion, revolving around the main clusters of governance (focusing on the Arctic Council and the European Union, with the particular roles and interest of Arctic and non-Arctic states, and the impact on indigenous populations), environment (including the relevance of

national regulatory schemes, and the intertwinement with concerns related to energy, or migration), strategy (concentrating in geopolitical realities and challenges analysed from different perspectives and focusing on different actors, and covering security and climate change related challenges). This collection provides an avenue for parallel and converging research of complex realities from different disciplines, through the expertise of scholars from different latitudes.

This book collects approximately nine hundred problems that have appeared on the preliminary exams in Berkeley over the last twenty years. It is an invaluable source of problems and solutions. Readers who work through this book will develop problem solving skills in such areas as real analysis, multivariable calculus, differential equations, metric spaces, complex analysis, algebra, and linear algebra.

Metacognition plays an important role in numerous aspects of higher educational learning strategies. When properly integrated in the educational system, schools are better equipped to build more efficient and successful learning strategies for students in higher education. *Metacognition and Successful Learning Strategies in Higher Education* is a detailed resource of scholarly perspectives that discusses current trends in learning assessments. Featuring extensive coverage on topics such as spiritual intelligence strategies, literacy development, and ubiquitous learning, this is an ideal reference source for academicians, graduate students, practitioners, and researchers who want to improve their learning strategies using metacognition studies.

Numbers are vital to so many areas of life: in science, economics, sports, education, and many aspects of everyday life from infancy onwards. This handbook brings together the different research areas that make up the vibrant field of numerical cognition in one comprehensive and authoritative volume.

This therapist guide outlines a treatment program for couples wherein one partner has an alcohol use disorder. Based on the principles of CBT, this 12-session couples-focused program is designed not only to help the drinking partner stop drinking, but also to help his or her partner change behaviors that may contribute to the drinker's problem. Another aim of treatment is to enhance the couple's relationship. *TreatmentsThatWork™* represents the gold standard of behavioral healthcare interventions! · All programs have been rigorously tested in clinical trials and are backed by years of research · A prestigious scientific advisory board, led by series Editor-In-Chief David H. Barlow, reviews and evaluates each intervention to ensure that it meets the highest standard of evidence so you can be confident that you are using the most effective treatment available to date · Our books are reliable and effective and make it easy for you to provide your clients with the best care available · Our corresponding workbooks contain psychoeducational information, forms and worksheets, and homework assignments to keep

clients engaged and motivated · A companion website (www.oup.com/us/ttw) offers downloadable clinical tools and helpful resources · Continuing Education (CE) Credits are now available on select titles in collaboration with PsychoEducational Resources, Inc. (PER)

First released in the Spring of 1999, *How People Learn* has been expanded to show how the theories and insights from the original book can translate into actions and practice, now making a real connection between classroom activities and learning behavior. This edition includes far-reaching suggestions for research that could increase the impact that classroom teaching has on actual learning. Like the original edition, this book offers exciting new research about the mind and the brain that provides answers to a number of compelling questions. When do infants begin to learn? How do experts learn and how is this different from non-experts? What can teachers and schools do-with curricula, classroom settings, and teaching methods--to help children learn most effectively? New evidence from many branches of science has significantly added to our understanding of what it means to know, from the neural processes that occur during learning to the influence of culture on what people see and absorb. *How People Learn* examines these findings and their implications for what we teach, how we teach it, and how we assess what our children learn. The book uses exemplary teaching to illustrate how approaches based on what we now know result in in-depth learning. This new knowledge calls into question concepts and practices firmly entrenched in our current education system. Topics include: How learning actually changes the physical structure of the brain. How existing knowledge affects what people notice and how they learn. What the thought processes of experts tell us about how to teach. The amazing learning potential of infants. The relationship of classroom learning and everyday settings of community and workplace. Learning needs and opportunities for teachers. A realistic look at the role of technology in education.

This book makes a case for the mother tongue as the medium of education for the first 12 years of the child's life. It describes Nigeria's 6-Year Primary Project, which taught experimental

groups of students in their native Yoruba in varying degrees for their first 6 school years, beginning in 1970. The book shows how the mother-tongue education program was planned, organized, and implemented. Chapter 1 traces the historical background of mother-tongue education, describing educational policy and the primary school system under British rule, and the changes made thereafter. Chapter 2 describes plans for the project including initial goals and funding. Chapters 3 and 4 discuss curriculum development and production, describing how panels developed materials for mathematics, science, social studies, Yoruba, and English instruction. Chapter 5 describes teacher preparation, including workshops and on-the-job training. Chapter 6 describes instructional programs and objectives for each subject. Chapter 7 examines problems encountered during the project. Chapter 8 offers a comprehensive evaluation of the project, including methodology and longitudinal achievement test results (from the five sample groups) that compare several variables, including urban and rural settings. Chapter 9 offers observations and recommendations for other countries, noting literacy-rate improvement and enhancement of the instructional language itself. (TES)

· a multidisciplinary review including the latest developments in cancer immunotherapy from over 70 experts and leaders · hands-on, practical guide to immunotherapy for hospital and community teams, GPs and allied care professionals, including 23 case studies · a valuable learning tool for doctors, nurses, graduate medical trainees, care managers and anyone involved in cancer care produced in partnership with the Association of Cancer Physicians (ACP) Editors and authors have drawn on their expertise and growing experience of immunotherapy to produce this practical guide to cancer immunotherapy. It provides a compendium of best practice, including 23 case studies to act as models for professionals making decisions, either for individual patients or as the basis for using immunotherapy across an organisation, planning area, region or country. As well as

introducing key concepts, expert practitioners provide a guide to future treatments using novel technologies, discuss key problems and suggest solutions, and consider the costs of immunotherapy treatments. This guide is designed as a handbook for practising clinicians and professionals. It is also an excellent training tool that will help new teams and clinical staff to align thinking, develop procedures, and adopt best practice.

Complex behavior models (plasticity, cracks, visco elasticity) face some theoretical difficulties for the determination of the behavior law at the continuous scale. When homogenization fails to give the right behavior law, a solution is to simulate the material at a meso scale in order to simulate directly a set of discrete properties that are responsible of the macroscopic behavior. The discrete element model has been developed for granular material. The proposed set shows how this method is capable to solve the problem of complex behavior that are linked to discrete meso scale effects. The first book solves the local problem, this second title presents a coupling approach to link the structural effects to the local ones, the third book presents the software workbench that includes all the theoretical developments.

Human influences create both environmental problems and barriers to effective policy aimed at addressing those problems. In effect, environmental managers manage people as much as they manage the environment. Therefore, they must gain an understanding of the psychological and sociopolitical dimensions of environmental problems that they are attempting to resolve. In *Environmental Problem Solving*, Alan Miller reappraises conventional analyses of environmental problems using lessons from the psychosocial disciplines. He combines the disciplines of ecology, political sociology and psychology to produce a more adaptive approach to problem-solving that is specifically geared toward the environmental field. Numerous case studies demonstrate the practical application of theory in a way that is useful to technical and scientific professionals as well as to policy makers and planners. Alan Miller is Professor of Psychology at the University of New Brunswick.
