The fun and simple problem-solving guide that took Japan by storm Ken Watanabe originally wrote *Problem Solving 101* for Japanese schoolchildren. His goal was to help shift the focus in Japanese education from memorization to critical thinking, by adapting some of the techniques he had learned as an elite McKinsey consultant. He was amazed to discover that adults were hungry for his fun and easy guide to problem solving and decision making. The book became a surprise Japanese bestseller, with more than 370,000 in print after six months. Now American businesspeople can also use it to master some powerful skills. Watanabe uses sample scenarios to illustrate his techniques, which include logic trees and matrixes. A rock band figures out how to drive up concert attendance. An aspiring animator budgets for a new computer purchase. Students decide which high school they will attend. Illustrated with diagrams and quirky drawings, the book is simple enough for a middle schooler to understand but sophisticated enough for business leaders to apply to their most challenging problems.

Calm your thoughts, navigate your stress, and understand your anxiety with this compact illustrated guide for overthinkers everywhere. Are you an overthinker? You're not alone! In a world full of deadlines, and technology, and constant stress, anxiety sometimes feels inevitable. But what if you learned to ride the wave of anxiety, instead of getting lost in it? *Get Out of My Head* is here to help, providing guidance and inspiration for anxious overthinkers of all sorts. This compact, illustrated book offers soothing techniques for understanding anxiety and moving through the traps of overthinking. Aimed at a modern audience looking for support and community, this beautifully illustrated guide offers a joyful, manageable way to deal with anxiety and quiet stressful thoughts through easy exercises, bite-sized takeaways, and calming visuals. Written by Meredith Arthur, founder of the popular mental health platform Beautiful Voyager, and illustrated by Leah Rosenberg, this charming alternative to

technical mental health guides walks readers through the process of building awareness around anxiety, identifying triggers, moving through blocks, building healthy boundaries, and developing an arsenal of tools for thriving. With actionable tips throughout, and a special section on dealing with end-of-year anxieties, this striking volume also includes a small, saddle-stitched secondary book -- meant to act like a weighted blanket in book form for help on the go -- in a concealed internal pocket.

Find the optimal solutions to your problems. Gain a deep understanding of the "what, why, how, when, how much" questions of your life. Become a Systems Thinker and discover how to approach your life from a completely new perspective. What is systems thinking? Put it simply, thinking about how things interact with one another. Why should this matter to you? Because you are a system. You are a part of smaller and larger systems - your community, your country, your species. Understanding your role within these systems and how these systems affect, hinder, or aid the fulfillment of your life can lead you to better answers about yourself and the world. Information is the most precious asset these days. Evaluating that information correctly is almost priceless. Systems thinkers are some of the bests in collecting and assessing information, as well as creating impactful solutions in any context. The Systems Thinker will help you to implement systems thinking at your workplace, human relations, and everyday thinking habits. Boost your observation and analytical skills to find the real triggers and influencing forces behind contemporary politics, economics, health, and education changes. Systems thinking clears your vision by teaching you not only to find the differences between the elements but also the similarities. This bi-directional analyzing ability will give you a more complex worldview, deeper understanding of problems, and thus better solutions. The car stopped because its tank is empty - so it needs gas. Easy problem, easy solution, right? But could you explain just as easily why did the price of gas raise with 5% the past month? After becoming a systems thinker, you'll be able to answer that question just as easily. Change your thoughts, change your results. -What are the main elements, questions and methods of thinking in systems? -The most widely used systems archetypes, maps, models, and analytical methods. -Learn to identify and provide solutions even the most complex system problems. -Deepen your understanding about human motivation with systems thinking. The past fifty years brought so many changes in our lives. The world has become more interconnected than ever. Old rules can't explain the new world anymore. But systems thinking can. Embrace systems thinking and become a master of analytical, critical, and creative thinking. *Fourteen Skills for Making Smarter Decisions in Business and in Life* Basic Books

An invaluable resource for any manager or professional, this book offers a collection of proven, practical methods for simplifying any problem and making faster, better decisions every time. A thinking student is an engaged student Teachers often find it difficult to implement lessons that help students go beyond rote memorization and repetitive calculations. In fact, institutional norms and habits that permeate all classrooms can actually be enabling "non-thinking" student behavior. Sparked by observing teachers struggle to implement rich mathematics tasks to engage students in deep thinking, Peter Liljedahl has translated his 15 years of research into this practical guide on how to move toward a thinking classroom. *Building Thinking Classrooms in Mathematics, Grades K-12* helps teachers implement 14 optimal practices for thinking that create an ideal setting for deep mathematics learning to occur. This guide Provides the what, why, and how of each practice and answers teachers' most frequently asked questions Includes firsthand accounts of how these practices foster thinking through teacher and student interviews and student work samples Offers a plethora of macro moves, micro moves, and rich tasks to get started Organizes the 14 practices into four toolkits that can be implemented in order and built on throughout the year When combined, these unique research-based practices create the optimal conditions for learner-centered, student-owned deep mathematical thinking and learning, and have the power to transform mathematics classrooms like never before.

For over 2000 years, philosophy has been our best guide to the experience of being human, and the true nature of reality. From Aristotle, Plato, Epicurus, Confucius, Cicero and Heraclitus in ancient times to 17th century rationalists Descartes, Leibniz and Spinoza, from 20th-century greats Jean-Paul Sartre, Jean Baudrillard and Simone de Beauvoir to contemporary thinkers Michael Sandel, Peter Singer and Slavoj Zizek, *50 Philosophy Classics* explores key writings that have shaped the discipline and had an impact on the real world. Philosophy can no longer be confined to academia, and *50 Philosophy Classics* shows how powerful it can be as a tool for opening our minds and helping us

think. Whether you are fascinated or daunted by the big questions of how to think, how to be, how to act and how to see, this is the perfect introduction to some of humanity's greatest minds and their landmark books.

With the help of guided exercises, you will learn how to do your own research, think about information for yourself, and draw conclusions that stand true to you. Avoid being manipulated. Being surrounded by inaccurate and often misleading information can feel overwhelming. Become more astute and catch inconsistencies in others' reasoning, don't be misled. Learn to question, fact-check, and correct people without sounding offensive. - How to self-educate to think more critically. - Equip yourself with good questions and ideas on how to think for yourself. - Break out of herd mentality. - Get a structure on how to implement critical thinking practices in your life. Human beings are generally curious and wish to understand the world better. But many of us didn't have the luck to learn effective questioning techniques as children. We were not encouraged to form opinions and were rather scolded for being too curious. So we didn't learn how to properly question and assess the information we hear, read, and how to think for ourselves. But we can absolutely change that! And educate our children to be better equipped with critical thinking skills. Make better decisions. Don't be gullible.
