Teaching STEM in the Early Years Early Childhood
 School readiness is as much about schools recognizing the existing capabilities and knowledge each child has when they enter school as it is about supporting children and families in their preparation for entering formal learning environments.

Effective approaches that address learning variability must take these differences into account, recognizing and leveraging opportunities inherent in the child's ecosystem of resources. The Handbook of Research on Innovative Approaches to Early Childhood Development and School Readiness assembles the most current research and thought-leadership on the ways in which innovative education stakeholders are working together to impact the most critical years in a child's life—the years leading up to and including kindergarten. Covering topics such as change agency, experience quality, and social-emotional development, this book is a crucial resource for educational researchers, child development professionals, school administrators, pre-K teachers, pre-service teachers, program managers, policymakers, non-profit service organizations, early childhood EdTech developers, curriculum developers, and academicians.

Overview and Directory McGraw-Hill Education (UK)

Levels of violence, abuse and neglect in early childhood are reported internationally as having reached epidemic proportions. The prevalence of all forms of violence to children has been difficult to establish, particularly in low and middle income countries. However, even in countries with a high GDP, the sexual abuse of children and young people by predatory adults may continue undetected for decades. In parts of Africa young children are mutilated and killed for religious reasons. Physical beatings that injure and break bones are still common in the Western world. Pornography and sexual abuse involving young children is propagated worldwide through the internet. The prevention of this violence will require substantial shifts in parental and public attitudes to children and the development and support of national

systems of preventive legislation. The last 20 years has seen the emergence of a body of material which interrogates early childhood violence and neglect in a wider range of global settings, particularly those countries with a low GDP. This book aims to highlight important features of national and international initiatives which are rooted in findings from systematic research. The continued abuse and neglect of children has been attributed to social acceptance, not understanding the importance of reporting abuse, and the limitations of child welfare systems. This book will be of interest to practitioners in health care, education, and social work services, as well as field workers implementing programmes to address all forms of abuse at family, community and national level. This book was originally published as a special issue of *Early Child Development and Care*.

Mother Goose on the Loose Neal Schuman Pub

This book approaches STEAM (Science, Technology, Engineering, the Arts and Mathematics) in early childhood education from multiple angles. It focuses on the teaching and learning of children from two years of age to the early years of school. Proponents of STEAM describe how it can create opportunities for children to learn creatively, and various chapter authors make strong connections between discipline areas within the context of an informal curriculum. Others advocate for an integrated STEM, rather than STEAM, approach. With a light touch on theory and a focus on how to embed STE(A)M in an integrated early childhood curriculum, the editors and contributors examine the STEAM versus STEM question from multiple angles. The chapters provide

helpful frameworks for parents, teachers and higher education institutions, and make practical suggestions of ways to support young children's inquiry learning. Drawing on pedagogy and research from around the world, this book will be of interest to scholars of STEAM education, early childhood educators, students of early childhood education and parents of young children.
