 The seven-volume set LNCS 12137, 12138, 12139, 12140, 12141, 12142, and 12143 constitutes the proceedings of the 20th

International Conference on Computational Science, ICCS 2020, held in Amsterdam, The Netherlands, in June 2020.* The total of 101 papers and 248 workshop papers presented in this book set were carefully reviewed and selected from 719 submissions (230 submissions to the main track and 489 submissions to the workshops). The papers were organized in topical sections named: Part I: ICCS Main Track Part II: ICCS Main Track Part III: Advances in High-Performance Computational Earth Sciences: Applications and Frameworks; Agent-Based Simulations, Adaptive Algorithms and Solvers; Applications of Computational Methods in Artificial Intelligence and Machine Learning; Biomedical and Bioinformatics Challenges for Computer Science Part IV: Classifier Learning from Difficult Data; Complex Social Systems through the Lens of Computational Science; Computational Health; Computational Methods for Emerging

Problems in (Dis-)Information Analysis Part V: Computational Optimization, Modelling and Simulation; Computational Science in IoT and Smart Systems; Computer Graphics, Image Processing and Artificial Intelligence Part VI: Data Driven Computational Sciences; Machine Learning and Data Assimilation for Dynamical Systems; Meshfree Methods in Computational Sciences; Multiscale Modelling and Simulation; Quantum Computing Workshop Part VII: Simulations of Flow and Transport: Modeling, Algorithms and Computation; Smart Systems: Bringing Together Computer Vision, Sensor Networks and Machine Learning; Software Engineering for Computational Science; Solving Problems with Uncertainties; Teaching Computational Science; UNCertainty QUantificatiOn for ComputationAI modeLs

*The conference was canceled due to the COVID-19 pandemic.

Creep and Fracture in High Temperature Components MIT Press

Provides information from around the world on creep in multiple high-temperature metals, alloys, and advanced materials.

John Wiley & Sons

Psychiatrists and neuroscientists discuss the potential of computational approaches to address problems in psychiatry including diagnosis, treatment, and integration with neurobiology. Modern psychiatry is at a crossroads, as it attempts to balance neurological analysis with psychological assessment.

Computational neuroscience offers a new lens through which to view such thorny issues as diagnosis, treatment, and integration with neurobiology. In this volume, psychiatrists and theoretical and computational neuroscientists consider the potential of computational approaches to psychiatric issues. This unique collaboration yields surprising results, innovative synergies, and novel open questions. The contributors consider mechanisms of psychiatric disorders, the use of computation and imaging to model psychiatric disorders, ways that computation can inform psychiatric nosology, and specific applications of the computational approach. Contributors Susanne E. Ahmari, Huda Akil, Deanna M. Barch, Matthew Botvinick, Michael Breakspear, Cameron S. Carter, Matthew V. Chafee, Sophie Denève, Daniel Durstewitz, Michael B. First, Shelly B. U.S. Trade Shifts in Selected Commodity Areas Trafford Publishing

Provides background information, historical perspective, and expert commentary on the ASME B31.3 Code requirements for process piping design and construction. It provides the most complete coverage of the Code that is available today and is packed with additional information useful to those responsible for the design and mechanical integrity of process piping.

Gas Pipeline Hydraulics Amer Society of Mechanical

Keep it Running, Keep it Safe is based upon the highly regarded Process Machinery Safety and Reliability by the same author. Keep it Running, Keep it Safe, is an invaluable ready reference for day to day work in the process industries. The book outlines a procedure for the assessment of machinery safety and reliability, covering: Hazard assessment Legal requirements Reliability hazards and failure modes Control of Hazards Health and safety compliance It provides a general interpretation of the relevant legislation and identifies safety measures and procedures for the assessment of equipment safety and reliability. With liberal use of case studies and real examples, it explains complex issues in a direct and straightforward style. Keep it Running, Keep it Safe offers a comprehensive understanding of the issues and techniques involved in improving safety and reliability with the potential to make a real difference to everyday engineering practice for plant managers, plant engineers, maintenance engineers, loss prevention engineers, engineering designers, inspectors, and all those concerned with the safe and efficient operation of engineering plant.

DIN EN 13480-3/A3, Metallische industrielle Rohrleitungen. Teil 3, Konstruktion und Berechnung DEStech Publications, Inc

This book is concerned with the steady state hydraulics of natural gas and other compressible fluids being transported through pipelines. Our main approach is to determine the flow rate possible and compressor station horsepower required within the limitations of pipe strength,

based on the pipe materials and grade. It addresses the scenarios where one or more compressors may be required depending on the gas flow rate and if discharge cooling is needed to limit the gas temperatures. The book is the result of over 38 years of the authors' experience on pipelines in North and South America while working for major energy companies such as ARCO, El Paso Energy, etc.
