aphic information science or geographical information science is the scientific discipline that studies the techniques to capture, represent, process, and analyze geographic information. It can be contrasted with geographic information systems, which are software tools. British geographer Michael Goodchild defined this area in the 1990s and summarized

its core interests, including spatial analysis, visualization, and the representation of uncertainty. GIScience is conceptually related to geospatial information science - Wikipedia Geographic Information Systems Geographic information system (GIS) technology can be used for scientific investigations, resource management, and development planning. For example, a

GIS might allow emergency planners to easily calculate emergency response times in the event of a natural disaster, or a GIS might be used to find wetlands that need protection from pollution. What is a geographic information system (GIS)? A geographic information system (GIS) is a framework for gathering, managing, and analyzing data. Rooted

in the science of geography, GIS integrates many types of data. It analyzes spatial location and organizes layers of information into visualizations using maps and 3D scenes. What is GIS? | Geographic Information System Mapping ... Geographic Information Systems as a Tool for Environmental Assessment. Geographic information systems (GISs) have become a

standard tool for use in environmental assessment and analysis due to the complexity and volume of information now available. In the past few decades, an increased demand for the efficient storage, analysis, and display of environmental data has led to use of computers and the development of sophisticated information systems. Geographic Information Systems - an overview
