KAEL GAIGE

The Motives of Eastern African Students for Seeking Graduate Degrees at Andrews and Michigan State Universities Jones & Bartlett Publishers

The Conflict over the Conflict offers a unique view of the threat to free speech, academic freedom, and the future of the academy posed by those on both sides of the Israel/Palestine campus debate.

Sir Robert Filmer (1588-1653) and the patriotic monarch JHU Press

Introduction to Public History: Interpreting the Past, Engaging Audiences is a brief foundational textbook for public history. It is organized around the questions and ethical dilemmas that drive public history in a variety of settings, from local community-based projects to international case studies. This book is designed for use in undergraduate and graduate classrooms with future public historians, teachers, and consumers of history in mind. The authors are practicing public historians who teach history and public

history to a mix of undergraduate and graduate students at universities across the United States and in international contexts. This book is based on original research and the authors' first-hand experiences, offering a fresh perspective on the dynamic field of public history based on a decade of consultation with public history educators about what they needed in an introductory textbook. Each chapter introduces a concept or common practice to students, highlighting key terms for student review and for instructor assessment of student learning. The body of each chapter introduces theories, and

basic conceptual building blocks intermixed with case studies to illustrate these points. Footnotes credit sources but also serve as breadcrumbs for instructors who might like to assign more in-depth reading for more advanced students or for the purposes of lecture development. Each chapter ends with suggestions for activities that the authors have tried with their own students and suggested readings, books, and websites that can deepen student exposure to the topic.

This book offers you a brief, but very involved look into the operations in the exploitation of Oil & Gas wells that will help you to be prepared for job interview at oil & gas companies. From start to finish, you'll see a general prognosis of the production process. If you are new to the oil & gas industry, you'll enjoy having a leg up with the knowledge of these processes. If you are a seasoned oil & gas person, you'll enjoy reading what you may or may not know in these pages. This course provides a non-technical overview of the phases, operations and terminology used on offshore production platforms. It is intended also for non-drilling personnel

who work in the offshore drilling, exploration and production industry. This includes marine and logistics personnel, accounting, administrative and support staff, environmental professionals, etc. No prior experience or knowledge of drilling operations is required. This course will provide participants a better understanding of the issues faced in all aspects of drilling operations, with a particular focus on the unique aspects of offshore operations.

It's time to design the next iteration of higher education. There is no question that higher education faces significant challenges. Most of today's universities aren't prepared to tackle issues like demographic change, the continued defunding of public education, cost pressures, and the opportunities and challenges of educational technologies. Then, of course, there is the shock of the COVID-19 pandemic, which will reverberate for years and may very well usher higher education into an era of significant structural change. Some critics argue that a premium should be placed on change functions—that is to say, on creativity, innovation, organizational learning, and change management. Yet few institutions of higher education have functions focused on thoughtful, iterative

problem-solving and opportunity identification. The authors of *Design for Change in Higher Education* argue that we must imagine and actively make our way to new institutional forms. They assert that design—a practical art that is conceptually rich and visible in its concreteness—must become a core internal competency of the university. They propose one grounded in the practical experiences of a specific educational design organization: Michigan State University's Hub for Innovation in Learning and Technology, which all three authors have helped to run. The Hub was created to address issues of participation, impact, and scale in moving learning innovations from the individual to the collective and from the classroom to the institution. Framing each chapter around a case study of design practice in higher education, the book uses that case study as the foundation on which to build design theory for higher education. It is complemented by an online playbook featuring tactics that can be used and adapted by others interested in facilitating their own design work. Touching on learning experience design (LXD) as an increasingly critical practice, the authors

also develop a constructivist view of designing conversations. A playbook that grounds theory in practice, *Design for Change in Higher Education* is aimed at faculty, staff, and students engaged in the important work of imagining new forms of education.

Theory and Research for Academic Nurse Educators: Application to Practice is an essential guide to nursing education theory, research and it's application in the classroom. Designed for the nurse educator, this comprehensive guide is focused around the National League for Nursing's eight core competencies for academic nurse educators. This textbook contains an overview of the academic nurse educator role, core competencies, strategies for applying theory and research-based knowledge to further professional development. This text is an ideal resource for nurses preparing for the Certified Nurse Educator Exam (CNE) and nursing education students. Important Notice: the digital edition of this book is missing some of the images or content found in the physical edition.

[An Integrated Assessment of China's Ecological Restoration Programs](#) Petrogav International

The book contains 267 questions and answers for job interview for hiring on

offshore drilling rigs.

Water and Life Petrogav International China has been undertaking unprecedented ecological restoration efforts to deal with its problems of soil erosion, flooding, dust storms, and habitat loss. While there have been studies of these efforts, questions remain concerning whether they have been effectively implemented, what their induced socioeconomic and ecological impacts are, and how their performance can be improved. Tackling these important questions in an integrated manner, "An Integrated Assessment of China's Ecological Restoration Programs" is extraordinary for its broad coverage and methodological rigor. It provides a substantial improvement over the conventional approach of simply reporting projects undertaken and accepting uncritically the government assessment, and thus fills an important knowledge gap of the restoration efforts being implemented upon a variety of ecosystems in China.

The first book of its kind, *Science is Golden* discusses how to implement an inquiry-based, problem-solving approach to science education (grades K-5). Finkelstein shows parents and teachers how to help students investigate their own scientific

questions. Rather than a set of guidelines for science fair projects, this book presents a method for helping students expand their creativity and develop logical thinking while learning science. Starting with an introduction to the "brains-on method," *Science is Golden* explains brainstorming, experimental controls, collecting data, and how to streamline children's questions about science so that the questions define an experiment. Students will learn how to: ask good questions; clarify terminology; research, plan, and design experiments and controls; test assumptions; collect and analyze data; present results to others; and collaborate with adults. *Science is Golden* is consistent with the National Science Education Standards proposed by the National Academy of Sciences, and the Michigan Essential Goals and Objectives for Science Education (K-12) from the Michigan State Board of Education. Presenting an analysis of the water relationships of the major groups of organisms: fungi, plants and animals, the text examines water stress at all levels of biological organization. Topics covered include: 1) organic osmotic agents: their distributions, modes of action, and mechanisms of regulation; 2) desiccation stress; mechanisms for preserving cellular integrity under conditions of low cellular water activity; 3) water stress and water compartmentation in plants; and 4) freezing stress: the prevention and regulation of ice formation in biological fluids, and mechanisms for overcoming the damaging effects of low temperatures on cellular integrity. Common adaptive strategies in diverse organisms are emphasized, as well as the fundamental physical-chemical properties of aqueous solutions that establish the nature of the

interactions among water, low molecular weight solutes and macromolecules.

Determinants of Stigma Routledge

This book, now available in paperback, studies the patriarchalist theories of Sir Robert Filmer (1588–1653) in the context of early modern English and European political cultures. Making use of unexplored primary material and adopting an innovative contextual approach, Cuttica provides a long-overdue account of an often referred-to but largely misunderstood thinker. By focusing on Filmer's most important writing, *Patriarcha* (written in the 1620s–30s but published in 1680), this monograph rethinks some crucial issues in the reading of political history in the seventeenth century. Most importantly, it invites new reflections on the theory of patriarchalism and gives novel insights into the place of patriotism in the development of English political discourse and identity. Thanks to its originality in both approach and content, this volume will be of interest to historians of early modern England as well as scholars of political thought.

Rowman & Littlefield

Robert Blake, now with Gabriel Guillén, updates his successful book (1st ed. 2008, 2nd ed. 2013) on how to teach foreign languages using technology. *Brave New Digital Classroom* touches on all of the key concepts and challenges of teaching with technology, focusing on issues specific to FLL or L2 learning and CALL. Originally referred to as computer-assisted language learning, CALL has come to encompass any kind of learning that uses digital tools for language learning. This edition reframes the conversation to account for how technology has been integrated into our lives. Blake and Guillén address the ways technology can help with L2, how to choose the right digital tools, how to use those tools effectively, and how technology can impact literacy and identity. The book is primed for use in graduate courses: terminology is in bold and a comprehensive glossary is included; each chapter finishes with a short list of references for further reading on the topic and discussion questions. The authors provide short interview videos (free via GUP website) to enhance discussions on each chapter's topic.
