People Flow in Buildings Springer

This book focuses on the spatial transformations in the most dynamically evolving urban areas of post-socialist Central and Eastern Europe. It links the restructuring of the built environment with the underlying processes and the forces of socio-economic reforms. The detailed accounts of the spatial transformations in a key moment of urban history in the region enhance our understanding of the linkages between society and space.

Realty and Building Routledge

Monografia prezentuje ciekawe podejście do analizy procesów metropolizacji, bazujące na niezwykle bogatych, zróżnicowanych, a często wręcz unikatowych danych, jak w przypadku przestrzeni coworkingowych. (...) Cenne jest ukazanie mechanizmów swoistej gry aktorów globalnych (inwestorów, deweloperów), władz miejskich oraz mieszkańców i pracowników, z której wyrasta przestrzeń współczesnych obszarów metropolitalnych. Z recenzji dr. hab. Roberta Pyki Największą zaletą książki jest ambitna i udana próba identyfikacji procesów kształtowania gospodarczej

(biznesowej) struktury przestrzennej Warszawy w minionych dekadach, z naciskiem na procesy zachodzące po wejściu Polski do Unii Europejskiej i w ostatnich latach. (...) Oryginalne i wartościowe jest również połączenie kwestii z pogranicza geografii przedsiębiorstw, usług, osadnictwa i gospodarki przestrzennej. Z recenzji dr. hab. Przemysława Śleszyńskiego, prof. PAN

Fair Employment Practice Cases Wydawnictwo Naukowe Scholar
 Cities around the world are becoming increasingly popular as economic powerhouses and magnets for migrants from rural and suburban areas. All big cities in First and Third World countries as well as emerging markets such as New York, London, Tokyo, Paris, Shanghai, Hong Kong, Singapore, New Dehli, Jakarta etc. have to cope with high population density and serious challenges such as air pollution or traffic congestion. How do we pack more people into big cities and yet continue to realise a high quality of life? How do we plan, create and manage 'good cities' which are safe, spacious, green, connected, fair and resilient? How can cities create economic wealth while still fulfilling the vision of sustaining our "Green Planet"? What are best practice designs and innovative technical smart city solutions which could be leveraged to tackle these challenges and how can they be

successfully commercialised? These are some of the questions the reader addresses from a multi-disciplinary perspective with special reference to Singapore whose development from regional entrepôt to First World Metropolis continues to impress business and societal leaders around the world. The book's contents are broadly structured according to the following aspects: (i) definition and taxonomy of innovative & sustainable cities, including its core characteristics and how they create value in terms of innovativeness and sustainability; (ii) governance, planning and selected design principles of innovative & sustainable cities and how they pan out with regard to livability and sustainability; and (iii) in-depth study of selected smart city dimensions such as governance, clustering, connectivity, mobility, ageing, water, sports, and safety.

Discover how to measure, control, model, and plan people flow within modern buildings with this one-stop resource from a leading professional People Flow in Buildings delivers a comprehensive and insightful description of people flow, analysis with software-based tools. The book offers readers an up-to-date overview of mathematical optimization methods used in control systems and transportation planning methods used to manage vertical and horizontal transportation. The text offers a starting point for selecting the optimal transportation equipment for new buildings and those being modernized. It provides insight into making passenger journeys pleasant and smooth, while providing readers with an examination of how modern trends in building usage, like increasingly tall buildings and COVID-19, effect people flow planning in buildings. People Flow in Buildings clearly defines the terms and symbols it includes and then moves on to deal with the measurement, control, modelling, and planning of people flow within buildings of all kinds. Each chapter contains an introduction describing its contents and the background of the subject. Included appendices describe measured passenger data and performed analyses. Readers will also benefit from the inclusion of: A thorough introduction to people-counting methods, including counting technology inside and outside buildings,

passenger traffic components, and manual people-counting An examination of the passenger arrival process in building, including the Poisson arrival process and probability density function, and passenger arrivals in batches A consideration of daily vertical passenger traffic profiles, including two-way traffic profiles and the effects of inter-floor traffic An exploration of people flow solutions, including stairs, escalators, and elevators with collective and destination group control systems, as well as double-deck and multicar system People flow calculation and simulation models Elevator planning with ISO simulation method Elevator planning and evacuation of tall buildings Perfect for software designers in the private sector and academia, People Flow in Buildings will also earn a place in the libraries of elevator consultants, manufacturers, and architects who seek a one-stop reference for transportation devices from a functional and design perspective, as opposed to a hardware perspective.

Microeconomics WIT Press

As the real estate market becomes increasingly international, it is essential to understand how specific national markets operate and relate to one another. The authors identify the similarities and differences observed across European, Asian and American markets, providing a framework to explain how these diverse national markets converge.

Eve McGraw Hill Professional

Metropolitan commercial real estate markets are highly influenced by global forces, the regional economy, and institutional behaviour. While descriptions of regional commercial real estate markets are well known and widespread in academic literature, this monograph goes beyond that in explaining the dynamics in and variations between European metropolitan markets. By comparing those markets on relevant indicators and through extensive data analysis, a number of explaining factors is revealed. Contributions on specific metropolitan markets with different positions within the real estate cycle illustrate not only the characteristics of the local economy and its institutions, but also urgent issues such as battling vacancy, changing retail hierarchy or managing obsolescence.

CORP 2011 Proceedings/Tagungsband McGraw Hill Professional

The twenty-first century is already an urban one. Cities are pivotal to sustainability concerns globalization, climate change, food security, environmental protection, and innovation. Today's urban actors, both citizens and their leaders, have a major responsibility as trustees of the future: their present actions will influence the shape and structure of cities, so that the generation to come may live healthy and contented lives. This volume takes the reader straight to the heart of how cities work, and identifies contemporary trends, mechanism and tools that can influence current strategies and choices. The authors show that urbanization is not a problem per se for sustainable development, but rather that cities, in all their diversity and complexity, offer solutions as well as challenges. The reader will be inspired by vital analyses of the next decade's windows of opportunity for sustainable urban growth.

Book of Lists Oxford Business Group

This collection of research papers, presented at meetings organised by the Wessex Institute of Technology (WIT), concerns a variety of issues relating to the area of sustainable development. WIT has a long and very successful record of organising conferences on the topic of sustainability, which requires an interdisciplinary approach. Any sustainable solutions that are derived solely from the perspective of a single discipline may have unintended damaging consequences that create new problems. Thus effective sustainable solutions require the collaboration of scientists and engineers from various disciplines,

as well as planners, architects, environmentalists, policy makers, social scientists, and economists. The contents of this book reflect that interdisciplinary approach, and include topics under the main areas of: Sustainable development and planning; Disaster management; Air pollution; Urban transport; Ecosystems and Water resources management.

Urban Design and the British Urban Renaissance John Wiley & Sons

Microeconomics: Theory & Applications, 13th Edition teaches students how fundamental tools of analysis are used explain and predict market phenomena. Designed for both economics and business students, this thorough yet accessible textbook describes basic microeconomic principles using various applications to clarify complicated economic concepts and provides an essential foundation of microeconomics knowledge. Clear and engaging chapters discuss cutting-edge models and explore numerous real-world examples of microeconomic theory in action. Comprehensive and topically relevant, this textbook offers greater coverage of input market analysis and applications than other texts on the subject. In-depth applications, such as consumer choice theory and noncompetitive market models, complement over 100 shorter applications that reinforce the graphical and logical techniques developed in the theory chapters. The authors' innovative use of relatable applications promotes student engagement and comprehension, and facilitates a case-based, active-learning approach. Discussion of globalization, ethics, sustainability, and other important contemporary themes helps students understand how economics impacts their lives in various, often unexpected ways.

Poor's provides the respected Standard & Poor's ratings and stock rankings, advisory services, data guides, and several closely watched and widely reported gauges of stock market activity. The British National Bibliography Planning for Retail Development Directory is indexed by name (parent and subsidiary), geographic location, Standard Industrial Classification (SIC) Code, and corporate responsibility.

Sustainable Development (2 Volume Set) Lulu.com

Written by a leading expert in the field, this is the first thorough critical review of retail planning policy in Britain (including Scotland and Wales). It covers recent changes in government policy and guidance, and examines retail policy within a broader economic and social context. Planning for Retail Development explains key events and debates in the evolution of retail planning policy, at central and local government levels, since the 1960s and draws contrasts between the 1980s, a period in which retail developers were encouraged by central government to expand away from town centres, and the more recent emphasis on protection and promotion of town centres as the most appropriate location for new development. The book develops a critical evaluation of past and present retail planning policies, based upon analyses of retailers' objectives and of typical consumer shopping behaviour. Relationships between retail planning and wider societal concerns, including sustainable development, social inclusion and urban regeneration are also examined and analysed and guidelines for future policy objectives and content are drawn.

Hoover's Masterlist of U.S. Companies Routledge

An insightful exploration of the strengths, weaknesses and implications of New Labour's urban renaissance agenda, experts in urban design and planning critically review the development and application of the strategy in Britain's largest cities.
