Water-proof block with very low CO2 load. About half the CO2 that is released during the production of the lime is eventually re-absorbed by the lime in the compressed earth block. Compressed Earth Blocks Natural building material How to Build a Compressed Earth Block Home. contributor: Rob Goodier . Building with compressed-earth blocks makes sense, and not just because most of the construction materials are right under our feet. Earthen walls regulate temperatures, dampen sound, repel mold and, with the right build, they can resist earthquakes, fires and other disasters. How to Build a Compressed Earth Block Home The first attempts for compressed earth blocks were tried in the early days of the 19th century in Europe. The architect François Cointereaux precast small blocks of rammed earth and he used hand rammers to compress the humid soil into a small wooden mould held with the feet. Earth utilizes compressed earth blocks (CEB) to convert soil into building bricks - creating durable and sustainable structures out of local natural resources. We deliver innovative building solutions with advanced compressed earth block technologies to help transform lives and communities throughout the world. Dwell Earth - Compressed Earth Blocks A

compressed earth block (CEB), also known as a pressed earth block or a compressed soil block, is a building material made primarily from damp soil compressed at high pressure to form blocks. Compressed earth blocks use a mechanical press to form blocks out of an appropriate mix of fairly dry inorganic subsoil, non-expansive clay and aggregate. If the blocks are stabilized with a chemical

ICEBs are earth blocks made primarily of soil and stabilized with cement. Seismic Design Manual for Interlocking Compressed Earth Blocks The CEB Press takes

earth/dirt/soil and compresses it tightly to make solid blocks useful for building. Compressed earth blocks have many advantages as a building material: by making the building materials from the readily available dirt on the building site, they eliminate the need to transport bricks from elsewhere, reducing the financial cost and environmental impact of transport.
