Adventure Sports Photography, by renowned photographer and workshop leader Tom Bol, combines personal stories from field experience with expert photo technique. Aspiring outdoor photographers, both adventure sports shooters and outdoor photography enthusiasts, will find this book to be a valuable reference and guide. It covers everything an adventure sports shooter needs to know to get the shot—from packing and organizing gear for an afternoon shoot of rock climbing at the local crag to a month-long sea kayaking expedition. You'll explore composition and creative angles for stunning adventure sports images, and learn in-depth techniques for using speedlights and strobes for creative lighting when you're shooting in the field. This book also shows you how to create a sequence shot and set up an effective digital workflow. In addition to creating environmental portraits, you'll find out how to produce quality video of adventure sports. Tom Bol has been photographing adventure sports for more than 25 years, documenting adventures on every continent, and his work has been published worldwide. He is a regular contributor to Digital Photo magazine, and he's been recognized as one of National Geographic Adventure's "50 of America's Top Visionaries" for his photography. Tom's work has been featured by Elinchrom, LowePro, Manfrotto, and Nikon, and he is a Sandisk Extreme Team member. PDN readers voted Tom one of the photography world's best workshop leaders. He is also an instructor at Kelby Training, Maine Photo Workshops, Photo Quest Adventures, and Strabo Photo Tours.

The Fujifilm X-T1 Cengage Learning

In this book, popular Fuji Rumors "X-Pert Corner" columnist Rico Pfisterer teaches about the little-known capabilities of the X-T1, which he's discovered through months of in-depth research and experimentation with the camera. After a brief overview of the camera's basic functions, Rico cuts to the chase and provides a plethora of tips and practical instructions not found in the user's manual. With this knowledge, you will be able to fully exploit the capabilities of the X-T1. The Fujifilm X-series cameras have amazing features but may require an adjustment period for those new to using these cameras, even photographers who have been lifetime DSLR shooters. This guide will help you to quickly feel comfortable using your camera so that you can achieve excellent results. Topics covered include: Menu shortcuts Long exposures Firmware upgrades Hybrid autofocus system Auto and manual focusing Face detection Infrared imaging Film simulations Custom settings Burst mode Panoramas Movies Self-timer Flash Adapted lenses And much more... This book includes complete coverage of the camera's new firmware features that were introduced in December 2014.

Tilt and shift lenses offer tremendous creative possibilities for users of digital SLR and mirrorless cameras. This practical book explains the techniques that will help you take better photos - photos that don't distort or lose focus. Assessing the benefits and pitfalls of a range of lenses, adapters, software and editing techniques, it guides you through the practicalities of working with these lenses and gives you the skills to use them to best effect. With stunning examples throughout, this book gives an overview of the different lenses available, and tips on how adapters can give tilt/shift options when using old medium-format lenses. It gives advice on how simple lens shift can change the entire look of your photos, and techniques for using lens tilt for focus control and close-up working. Stunning examples show the use of tilt and shift lenses across a range of available focal lengths, both tripod-mounted and handheld.

From the front it resembles an oversized Nikon FM, the mechanically operated, interchangeable lens, 35mm SLR that was produced between 1977 and 1982. In addition to the styling and external controls, the Df's other reference to Nikon's history is the retractable meter coupling tab, which allows the use of pre-1977 non-AI lenses. Much of what lies beneath the Df's decidedly retro skin, however, will be quite familiar to current users of modern digital SLRs. While the "D" in the name stands for "digital", the "f" stands for "fusion", referring to the marriage of old and new. Despite its pretensions of being a fully manual camera, the Df also features front and rear electronic control dials in addition to the physical dials on the top-plate. The Df is built around the 16MP full frame sensor from the company's flagship D4, and uses the processor and AF system from the cheaper D610 model. The optical viewfinder is very large; the magnification is 0.70x and the coverage 100%. When a DX lens is attached to the Df, the viewfinder shows frame-lines indicating the DX image area. Most notably, and unusual for a modern DSLR, although the camera is based on a video-capable sensor, the Df cannot shoot video. This, according to the developers, is because the Nikon Df is intended to be a serious camera for people who want to produce "pure" photography.

QF32 is the award winning bestseller from Richard de Crespigny, author of the forthcoming *Fly!: Life Lessons from the Cockpit of QF32* On 4 November 2010, a flight from Singapore to Sydney came within a knife edge of being one of the world's worst air disasters. Shortly after leaving Changi Airport, an explosion shattered Engine 2 of Qantas flight QF32 - an Airbus A380, the largest and most advanced passenger plane ever built. Hundreds of pieces of shrapnel ripped through the wing and fuselage, creating chaos as vital flight systems and back-ups were destroyed or degraded. In other hands, the plane might have been lost with all 469 people on board, but a supremely experienced flight crew, led by Captain Richard de Crespigny, managed to land the crippled aircraft and safely disembark the passengers after hours of nerve-racking effort. Tracing Richard's life and career up until that fateful flight, QF32 shows exactly what goes into the making of a top-level airline pilot, and the extraordinary skills and training needed to keep us safe in the air. Fascinating in its detail and vividly compelling in its narrative, QF32 is the riveting, blow-by-blow story of just what happens when things go badly wrong in the air, told by the captain himself. Aristotle's convincing philosophy is likely to have shaped (even indirectly) many of our current beliefs, prejudices and attitudes to life. This includes the way in which our mind (that is, our capacity to have private thoughts) appears to elude a scientific description. This book is about a scientific ingredient that was not available to Aristotle: the science of information. Would the course of the philosophy of the mind have been different had Aristotle pronounced that the matter of mind was information? This "mind is information" assertion is often heard in contemporary debates, and this book explores the verities and falsehoods of this proposition.

Payne Harrison's "Storming Intrepid" was a New York Times Bestseller and a cold war classic that helped define the techno-thriller genre. Now with "Eurostorm" he weaves his narrative magic yet again - this time aboard the Eurostar bullet train as it races under the English Channel from London to Paris. Sealed within the vault of an impregnable security car is a substance so secret and so lethal that only a handful of "mandarins" within Her Majesty's Government even know of its existence. Yet when the train exits from the Chunnel and heads toward Paris, Scotland Yard learns that an evil force has literally risen from the grave to ensnare the train and hijack a cargo that could alter the world as we know it.

Nikon D700 Digital Field Guide The Crowood Press

In this renowned guide to capturing the outdoor world on film, Galen Rowell, the connoisseur of outdoor and adventure photography, reveals the art, craft and philosophy behind his world-famous images in this stunningly illustrated book. Since it's original publication almost ten years ago, this groundbreaking work remains both an inspired manual to taking better pictures and an inspiring journey of discovery into the creative process. In more than 140 color photographs and 66 essays, Rowell shows how he transformed the natural world around him into vivid, memorable works of art. He covers everything from the practical and immensely helpful technicalities of how to pack equipment lightly and use the correct flash to the more theoretical concerns of imagining a photograph before pulling out the camera and immersing oneself fully into this natural and artistic quest. Both the artist and his unique talent come alive in these pages, a tribute to the ways in which his photographs, philosophy, and vision immeasurably enrich those who view his work.

This book looks at the link between voters and political party systems in Asian democracies, focusing on India, Indonesia, Korea and the Philippines. It discusses this link in terms of three distinct elements: the formation of voters preferences, the translation of preferences into votes, and the translation of votes into seats. The book goes on to discuss how far the general rules of political party systems and their underlying causal mechanisms such as strategic voting are apparent in these Asian democracies. In particular, it explores the extent to which electoral rules and social structural variables affect the process of transforming preferences into a political party system within the context of Asian politics. The extensive areas covered by the book overcome the traditional sub-regional division of Asia, namely, East, Southeast and South Asia.

Jaime Permut is a Guatemalan photographer living and working in New York City. His latest series of works, entitled 'Yonkeros', documents The Iron Triangle a small and often overlooked enclave of New York City which is home to dozens of junkyards and scrap metal businesses. The project, entitled 'Yonkeros' after the vernacular term that describes businesses that specialize in junk and scrap metal, seeks to document not only the daily lives of the people who live and work in the district, but also the juxtaposition of first-world waste and obsolescence against third-world ingenuity.
