The Animal Answer Guide Fox Chapel Publishing

Love Bird is the story of a squirrel family's dilemma of dealing with a very rude neighbor who just moved in to the branch above their home in the backyard oak tree. Their well-meaning attempts to be neighborly are shockingly returned with sarcasm and mockery. Because the whole neighborhood quickly becomes offended by this bird's behavior, the Squirrel family calls an emergency meeting where they manage to convince everyone to take an unusual approach to dealing with this neighborhood nuisance. They will respond to him with love. Everyone agrees to only speak words that are kind to this mockingbird, and in the end their wisdom is rewarded as he learns to repeat the kind words he is hearing. Everyone learns that love is not always just a fuzzy feeling, but sometimes a choice we must will ourselves to carry out.

From the New York Times bestselling author of *The Genius of Birds*, a radical investigation into the bird way of being, and the recent scientific research that is dramatically shifting our understanding of birds -- how they live and how they think. "There is the mammal way and there is the bird way." But the bird way is much more than a unique pattern of brain wiring, and lately, scientists have taken a new look at bird behaviors they have, for years, dismissed as anomalies or mysteries -- What they are finding is upending the traditional view of how birds conduct their lives, how they communicate, forage, court, breed, survive. They are also revealing the remarkable intelligence underlying these activities, abilities we once considered uniquely our own: deception, manipulation, cheating, kidnapping, infanticide, but also ingenious communication between species, cooperation, collaboration, altruism, culture, and play. Some of these extraordinary behaviors are biological conundrums that seem to push the edges of, well, birdness: a mother bird that kills her own infant sons, and another that selflessly tends to the young of other birds as if they were her own; a bird that collaborates in an extraordinary way with one species—ours—but parasitizes another in gruesome fashion; birds that give gifts and birds that steal; birds that dance or drum, that paint their creations or paint themselves; birds that build walls of sound to keep out intruders and birds that summon playmates with a special call—and may hold the secret to our own penchant for playfulness and the evolution of laughter. Drawing on personal observations, the latest science, and her bird-related travel around the world, from the tropical rainforests of eastern Australia and the remote woodlands of northern Japan, to the rolling hills of lower Austria and the islands of Alaska's Kachemak Bay, Jennifer Ackerman shows there is clearly no single bird way of being. In every respect, in plumage, form, song, flight, lifestyle, niche, and behavior, birds vary. It is what we love about them. As E.O Wilson once said, when you have seen one bird, you have not seen them all. 'One of the biggest mistakes we make,' Trevor Silvester says, 'is to treat other people as if they are just like us. I'm a Harley Street therapist, and over nearly twenty years I've been helping couples improve their lives together, and one thing is clear to me: most couples don't flounder through lack of love, but through a lack of understanding.' LOVEBIRDS includes a multiple choice test so that readers can discover which type they - and their partners - belong to. Then there is a description of each type - what makes them tick, their likes and dislikes, how they tend to behave, their body language, what they tend to look like, the line of work and hobbies they are likely to choose, their hopes and fears. So in this section you can read about yourself - and your partner. The final section looks at all the different possible combinations between the types, showing how misunderstandings can arise and giving advice on how to keep love between the different types of birds going and growing.
