'Punctuation is not only an important part of our language code; an advanced system of punctuation has been a driving force in our entire Western Civilisation. Nothing less.' With the invention of printing, reading books moved from being an act only performed by priests and aristocrats into an individual, even private, activity. This change helped spark the Renaissance, the Reformation, the Enlightenment and the Industrial Revolution - in which punctuation played a crucial role. As long as texts were read out loud only by an educated elite there was no need for punctuation to mark pauses, full stops or questions. So punctuation - the full stop, the comma, the exclamation mark, the question mark and the semicolon - helped shape modern-day Europe as we know it.

The workshop series on Text, Speech and Dialogue originated in 1998 with the first TSD1998 held

in Brno, Czech Republic. This year's TSD2000, already the third in the series, returns to Brno and to its organizers from the Faculty of Informatics at the Masaryk University. As shown by the ever growing interest in TSD series, this annual workshop developed into the prime meeting of speech and language researchers from both sides of the former Iron Curtain, which provides a unique opportunity to get acquainted with the current activities in all aspects of language communication and to witness the amazing vitality of researchers from the former East Block countries. Thanks need to be extended to all who continue to make the TSD workshop series such a success: first, to the authors themselves, without whom TSD2000 would not exist; next, to all organizations that support TSD2000, among them the International Speech Communication Association, the Faculty of Informatics at the Masaryk University in Brno and the Faculty of Applied Sciences, West Bohemia University in Plzen; and last but not least, to the organizers and members of the Program Committee who spent much effort to make TSD2000 success and who reviewed 131 contributions submitted from all corners of the world and accepted 75 out of them for presentation at the workshop. This book is evidence of the success of all involved.

This volume offers the reader a unique possibility to obtain a concise introduction to dependency linguistics and to learn about the current state of the art in the field. It unites the revised and extended versions of the linguistically-oriented papers to the First International Conference on Dependency Linguistics held in Barcelona. The contributions range from the discussion of definitional challenges of dependency at different levels of the linguistic model, its role beyond the classical grammatical description, and its annotation in dependency treebanks to concrete analyses of various cross-linguistic phenomena of syntax in its interplay with phonetics, morphology, and semantics, including phenomena for which classical simple phrase-structure based models have proven to be unsatisfactory. The volume will be thus of interest to both experts and newcomers to the field of dependency linguistics and its computational applications.

Believe it or not, you can use your favorite Rock-'n'-Roll song titles to show you, clearly and concisely, how English grammar and style work—and it's fun! Inspired by a lifelong love of music and language, this book captures the brilliant bond between music and language, using song titles as an innovative and memorable way to teach grammar and style. The book does not critique

grammar and style use in Rock-'n'-Roll song titles. Instead, it celebrates this use and demonstrates different kinds of sentences, parts of speech, verb tenses, stylistic figures of speech, and more.

The book starts with short but complete sentences—song title subject/verb combinations of songs you know such as “Love hurts” and “Voices carry.” The patterns of English grammar and style then become strikingly visible when you see them in the titles of Rock-'n'-Roll songs you love, all the way from the 1950s to today.

This book constitutes the refereed proceedings of the 16th International Conference on Text, Speech and Dialogue, TSD 2013, held in Pilsen, Czech Republic, in September 2013. The 65 papers presented together with 5 invited talks were carefully reviewed and selected from 148 submissions. The main topics of this year's conference was corpora, texts and transcription, speech analysis, recognition and synthesis, and their intertwining within NL dialogue systems. The topics also included speech recognition, corpora and language resources, speech and spoken language generation, tagging, classification and parsing of text and speech, semantic processing of text and speech, integrating applications of text and speech processing, as well as automatic dialogue systems, and multimodal techniques and modelling.

Although the grammatical expression of reciprocal (or 'mutual') situations in the languages of the world has received a surprising amount of attention in recent years, so far no comprehensive study specifically dealing with the historical development and synchronic structure of English reciprocal constructions has been published. This book takes into consideration insights from the three major research projects on reciprocity in the languages of the world as well as the rich literature on more specific aspects of reciprocity. Assuming a usage-based model of grammar, the development of the reciprocal strategies used in present-day English is described, with special attention paid to the periods following Middle English, where today's system began to take shape. The means of expressing reciprocity in today's English (e.g. the expressions each other and one another) are then analyzed as a system of competing constructions, the make-up and distribution of which can be related both to their history and subtle distinctions in meaning and use associated with the different constructions. Quantitative data from corpora of natural language provides evidence for the analyses put forward. Wherever possible, claims on the expression of reciprocity in present-day English are checked against what is known about the grammar of reciprocity in other languages.

Sentence craft is a text-workbook which presents in close correlation a discussion of the practice and theory of writing mature sentences and extensive exercise material to implement this instruction. Although the book has been planned primarily for the freshman course in composition, it can be used effectively at any college level; for it has been written to assist students to develop helpful techniques for securing order and design as they learn to write progressively more mature sentence.

Over the last 40 years, the study of word-order variation has become a prominent and fruitful field of research. Researchers of linguistic typology have found that every language permits a variety of word-order constructions, with subject, verb, and objects occupying varying positions relative to each other. It is frequently possible to classify one of the word orders as the basic or unmarked order and the others as marked. Moshavi's study investigates word order in the finite nonsubordinate clause in classical Biblical Hebrew. A common marked construction in this type of clause is the preposing construction, in which a subject, object, or adverbial is placed before the verb. In this work, Moshavi formally distinguishes preposing from other marked and unmarked constructions and explores the distribution of these constructions in Biblical Hebrew. She carries out a contextual analysis of a sample (the book of Genesis) of preposed clauses in order to determine the pragmatic functions that preposing may express. Moshavi's thesis is that the majority of preposed clauses can be classified as one of two syntactic-pragmatic constructions: focusing or topicalization. This meticulous yet approachable study will be useful both to students of Biblical Hebrew and to persons doing general study of syntax, especially those interested in the connection between linguistic form and pragmatic meaning.

Vulgar Latin refers to those features of Latin language that were not recommended by the classical grammarians but existed nonetheless. Although Vulgar Latin is not well documented, evidence can be deduced from details of the spelling, grammar, and vocabulary that occur in texts of the later Roman Empire, late antiquity, and the early Middle Ages. Every aspect of Vulgar Latin is exemplified in this book, proving that the language is not separate in itself, but an integral part of Latin. Originally published in French in 1967, Vulgar Latin was translated more recently into Spanish in an expanded and revised version. The English translation by Roger Wright accurately portrays Vulgar Latin as a complicated field of study, where little is known with absolute certainty, but a great deal can be worked out with considerable probability through careful critical analysis of the data. This text is an invaluable aid to research and understanding for all those interested in Latin, Romance languages, historical linguistics, early medieval texts, and early medieval history. József Herman is the former director of the Linguistic Research Institute at the Hungarian Academy of Sciences and is currently Professor of Latin Linguistics at the University of Venice. He is a well-known authority on the history of later Latin and the prehistory of Romance languages

The papers collected in this volume (including a comprehensive introduction) investigate semantic and discourse-related aspects of subordination and coordination, in particular the relationship between subordination/coordination at the sentence level and subordination/coordination – or

hierarchical/non-hierarchical organization – at the discourse level. The contributions in part I are concerned with central theoretical questions; part II consists of corpus-based cross-linguistic studies of clause combining and discourse structure, involving at least two of the languages English, German, Dutch, French and Norwegian; part III contains papers addressing specific – predominantly semantic – topics relating to German, English or French; and the papers in part IV approach the topic of subordination, coordination and rhetorical relations from a diachronic (Old Indic and Early Germanic) perspective. The book aims to contribute to a better understanding of information packaging on the sentence and text level related, within a particular language as well as cross-linguistically.

This sentence-to-paragraph-level worktext with readings highlights the complete writing process in relation to key rhetorical modes. Students learn the three stages of exploring, experimenting, and gathering information; writing the controlling idea, developing supporting details, and organizing content; and writing, revising, and editing. Comprehensive coverage of the basics enables students to develop sentences and paragraphs that are both well-structured and grammatically correct. The authors juxtapose sentence-level work with freewriting so that students gradually advance to writing full paragraphs and essays.
