The fourth
edition of this
well-known
text continues
the mission of

its
predecessors
"to help
teachers link
creativity
research and
theory to the
everyday
activities of
classroom
teaching. Part
I (chs 1-5)

includes
information on
models and
theories of
creativity,
characteristics
of creative
people, and
talent
development.
Part II
(chapters

6-10) includes strategies explicitly designed to teach creative thinking, to weave creative thinking into content area instruction, and to organize basic classroom activities (grouping, lesson planning, assessment, motivation and classroom organization) in ways that support students' creativity. Changes in this Edition: Improved Organization - This edition has been reorganized from 8 to 10 chapters allowing the presentation of theoretical material in clearer, more manageable chunks. New Material " In addition to general updating, there are more examples involving middle and secondary school teaching, more examples linking creativity to technology, new information on the misdiagnosis of creative students as ADHD, and more material on cross-cultural concepts of creativity, collaborative creativity, and linking creativity to state standards. Pedagogy & Design " Chapter-opening vignettes, within-chapter reflection questions and activities, sample lesson ideas from real teachers, and end-of-chapter journaling activities help readers adapt content to their own

teaching situations. Also, a larger trim makes the layout more open and appealing and a single end-of-book reference section makes referencing easier. Targeted specifically to educators (but useful to others), this book is suitable for any course that deals wholly or partly with creativity in teaching, teaching the gifted and talented, or teaching thinking and problem

solving. Such courses are variously found in departments of special education, early childhood education, curriculum and instruction, or educational psychology.

Neurological Surgery offers unparalleled, multimedia coverage of the entirety of this complex specialty.
Fully updated to reflect recent advances in the basic and clinical neurosciences , the 8th Edition covers everything you need to know about functional and restorative

neurosurgery, deep brain stimulation, stem cell biology, radiological and nuclear imaging, and neuro-oncology, as well as minimally invasive surgeries in spine and peripheral nerve surgery, and endoscopic and other approaches for cranial procedures and cerebrovascular diseases. In four comprehensive volumes, Dr. H. Richard Winn and his expert team

of editors and authors provide updated content, a significantly expanded video library, and hundreds of new video lectures that help you master new procedures, new technologies, and essential anatomic knowledge in neurosurgery. Discusses current topics such as diffusion tensor imaging, brain and spine robotic surgery, augmented reality as an aid in

neurosurgery, AI and big data in neurosurgery, and neuroimaging in stereotactic functional neurosurgery. 55 new chapters provide cutting-edge information on Surgical Anatomy of the Spine, Precision Medicine in Neurosurgery, The Geriatric Patient, Neuroanesthesia During Pregnancy, Laser Interstitial Thermal Therapy for Epilepsy, Fetal Surgery for Myelomeningo

cele, Rehabilitation of Acute Spinal Cord Injury, Surgical Considerations for Patients with Polytrauma, Endovascular Approaches to Intracranial Aneurysms, and much more. Hundreds of all-new video lectures clarify key concepts in techniques, cases, and surgical management and evaluation. Notable lecture videos include multiple videos on Thalamotomy

for Focal Hand Dystonia and a video to accompany a new chapter on the Basic Science of Brain Metastases. An extensive video library contains stunning anatomy videos and videos demonstrating intraoperative procedures with more than 800 videos in all. Each clinical section contains chapters on technology specific to a clinical area. Each section contains a chapter

providing an overview from experienced Section Editors, including a report on ongoing controversies within that subspecialty. Elsevier Health Sciences Mr. Hiroshi Tsuyuki, the Japanese authority on Jewelry Wax Modeling, uses an innovative approach to teaching the technique of wax modeling. Often a process is easier shown than described in so many words. This book was conceived through the author's teaching experience -- more photos and sketches and less text

resulting in less over-the-shoulder supervision. By introducing new techniques in each project, his students were able to progress more rapidly towards independence in design concepts. While preparing a model for casting and the actual casting process are adequately explained in most casting books, very little space is devoted to the design and creation of wax models.

Mr. Tsuyuki presents 11 basic projects in this book, each one designed to teach the use of certain tools and types of waxes in a progressive manner as one's skills improve. Each step of every project is accompanied by a photo and text and in some cases supplementary sketches and notes are provided to clarify those particular processes. Paying careful attention to the photos, noting the

demonstrator's hand position and the type of tool being used, eliminates any confusion which may result from the text. After each basic model is completed the author offers a number of sketches suggesting design possibilities using the techniques learned in the construction of the basic model. Mr. Tsuyuki states that by conscientiously completing each project, the student

should be well on the way to becoming a designer/modeler. This book is 112 pages and has 283 photos and illustrations.
