This book, first published in 1987, is about the classic free will problem, construed in terms of the implications of moral responsibility. The principal thesis is that the core issue is metaphysical: can scientific laws postulate objectively necessary connections between an action and

its causal antecedents? The author concludes they cannot, and that, therefore, free will and determinism can be reconciled.

The Just-in-time (JIT) manufacturing system is an internal system in use by its founder, Toyota Motor Corporation, but it has taken on a new look. Toyota Production System, Second Edition systematically describes the changes that have occurred to the most efficient production system in use today. Since the publication of the first edition of this book in 1983, Toyota has integrated JIT with computer integrated manufacturing technology and a

strategic information system. The JIT goal of producing the necessary items in the necessary quantity at the necessary time is an internal driver of production and operations management. The addition of computer integrated technology (including expert systems by artificial intelligence) and information systems technology serve to further reduce costs, increase quality, and improve lead time. The new Toyota production system considers how to adapt production schedules to the demand changes in the marketplace while satisfying the goals of low cost, high quality, and timely delivery. The first edition of this book, Toyota Production System,

published in 1983, is the basis for this book. It was translated into many languages including Spanish, Russian, Italian, Japanese, etc., and has played a definite role in inspiring production management systems throughout the world.

"The majority of products in most companies are cash traps . . . [They] are not only worthless, but a perpetual drain on corporate resources." "Use more debt than your competition or get out of the business." "When information flows freely, reputation, more than reciprocity, becomes the basis for trust." "As a strategic weapon, time is the equivalent

of money, productivity, quality, even innovation." "When brands become business systems, brand management becomes far too important to leave to the marketing department." "The winning organization of the future will look more like a collection of jazz ensembles than a symphony orchestra." "Most of our organizations today derive from a model whose original purpose was to control creativity." "Rather than being an obstacle, uncertainty is the very engine of transformation in a business, a continuous source of new opportunities." "IP assets lack clear property lines. Every bit of intellectual property

you can own comes with connections to other valuable innovations."
